

**2019**  
**AC & DCMicro series**  
**Hydraulic Power Packs**

Hydromat

# Why choose Hydronit?

- ❖ Complete focus on hydraulic components & modular power packs design, **continuous** research, development and **innovation**
- ❖ **Expertise** on hydraulic applications; design and development of **customised solutions**, including special manifolds, ex-proof units, proportional systems,...
- ❖ Organization fully based on processes and **Total Quality Management** principles through risk analysis, certified **ISO 9001**
- ❖ Lean and **energy efficient** product design and manufacturing
- ❖ Mass production and **cost optimization**: hundreds of thousands of Hydronit modular power packs are now reliably running worldwide
- ❖ Flexible marketing policy: supply of loose hydraulic components and power packs either in kit or fully assembled and tested in accordance with **Machine Directive 2006/42/CE**
- ❖ Distributors, associate companies and partners in over **50 countries** worldwide

# Hydronit - The sustainable factory

- ❖ Production is carried out in a building of 20000 m<sup>3</sup> requiring almost no use of fossil fuels to operate
- ❖ The **hyper insulation of the structure** through the use of materials, mainly natural, such as wood and cork, ensures a consumption of only 7,4 kWh/m<sup>3</sup>/year for winter heating and for summer cooling only 3,2 kWh/m<sup>3</sup>/year
- ❖ A **heat pump** provides high efficiency thermal regulation
- ❖ A system of 60 solar panels on the roof of the offices provides 13,8 kW of electrical power that contributes about 60% of the electricity consumed by the plant for its own operation
- ❖ **Solar thermal panels** provide hot water
- ❖ The **automatic warehouses** and the **semi-automatic assembly** line increase efficiency, reduce process paperwork and human errors, thus ensuring compliance with **stringent quality standards** and **consistent test results**

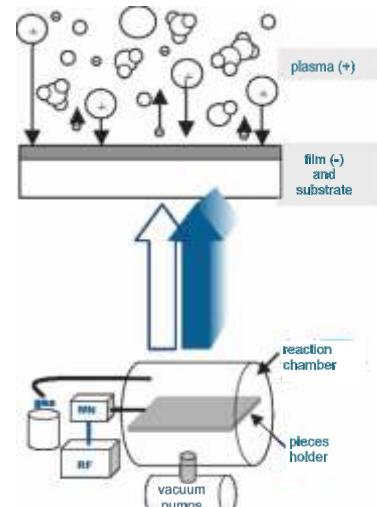

# Countinuous innovation

Hydranit Srl, in the pursuit of excellence, have dedicated a large part of their profits to **research and continuous development of the product**, in order to increase the performance, efficiency, durability and reliability over time, and for the **continuous improvement of the processes**, constantly monitoring efficiency and efficacy of the organization as a whole.

## Nanotechnology surface treatment

Hydranit Srl, in partnership with research institutions and external bodies, co-financed by the Lombardy Region, has conducted a project for the **development of advanced applications of plasma surface treatment of metallic materials**. In short it is the application of **nanotechnology** to hydraulic equipment to improve the performance of our units. We have obtained excellent results in the following fields: **improvement of the pressure tightness** of the aluminum die-casting; **improvement of the characteristics of surface hardness** of the treated components and a **remarkable increase in the corrosion resistance of the surface**. More information is available by contacting our sales department.

Treated manifold Nanotech

Standard manifold

Exposure to salt spray > 300 hours

## Product Configurator

Hydranit Srl has developed over the years a **smart Product Configurator** which allows the user, from a PC or mobile device web browser:

- to simply and quickly create the **speaking code** of the unit starting from the customer's specific requirements
- to **limit the possible mistakes** in the product configuration
- to obtain quickly the **unit description and parts list**, the **hydraulic diagram**, instant **3D preview**, **weight**, **dimensions**, **price** and **terms of sale**. This reduces the **time-to-market** and provides full information on the custom power unit to be realized, which can be easily transmitted to the final customer.

The access to the web configurator is offered free of charge to official partners of Hydranit Srl.

# Hydronit hydraulic range

Three main families: **Power Pack Micro**, **Power Pack Compact**, **Electropumps Bull** sharing most core components, allowing mass production and stock optimization.  
Design, research & development according to **flexibility**, **modularity** and **efficiency** principles.

## AC & DC MICRO hydraulic power packs

- ⊕ Extremely **compact** and **lightweight**
- ⊕ Flow: **0,2 ~ 6 l/min**
- ⊕ Pressure up to **250 bar**
- ⊕ DC motors up to **2,2 kW 12,24 and 48 VDC**
- ⊕ AC motors up to **1,8 kW single and three phase**
- ⊕ High modularity: single & double acting & reversible circuits from the same micro central manifold
- ⊕ Main valves **on one side** in most configurations for enhanced positioning in small machines

## AC & DC COMPACT hydraulic power packs

- ⊕ Over **10 years** of serial production
- ⊕ Hundred of thousands of power packs running worldwide
- ⊕ Flow: **0,2 ~ 25 l/min**
- ⊕ Low pressure drop
- ⊕ Pressure up to **300 bar** (or more in special application)
- ⊕ DC motors up to **4 kW 2,24 and 48 VDC**
- ⊕ AC motors up to **7,5 kW single and three phase**
- ⊕ High modularity: single & double acting & reversible
- ⊕ High modularity: single & double acting & reversible circuits from the same micro central manifold
- ⊕ Ideal choice for hydraulic distributors & assemblers
- ⊕ See PPC catalog

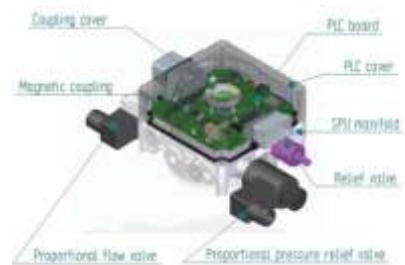

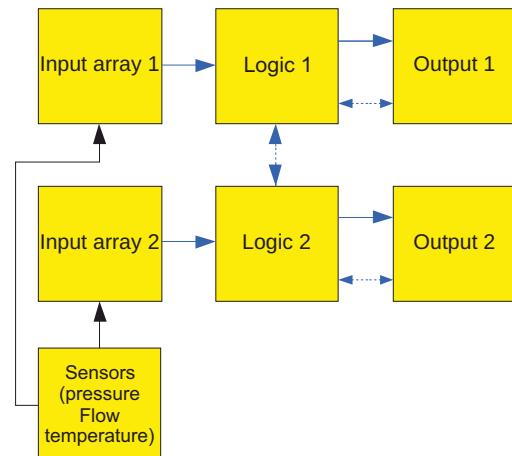

## DC electropumps

- ⊕ **0,15 ~ 4 kW, 12V, 24V and 48V DC** motors (same used in Compact and Micro power packs)
- ⊕ Forced ventilation **for high cycle times**
- ⊕ **0,19 ~ 7,9 cc/rev** gear pumps (same used in Compact and Micro power packs. Available also lateral ports pumps)
- ⊕ **Option:** relief valve, starter switch, thermal protection, foot mounting support
- ⊕ See EPB catalog

# Hydronit Smart Power Unit

The **SPU** is the first generation of **Programmable Digital Hydraulic Power Pack** available on the market.

The core of the Smart Power Unit is the **HPC (Hydraulic Process Controller)**: a Mechatronic Module which integrates Sensors, Electronics and Hydraulics in a single device. Programmable with **Codesys™ IEC61131-3** automation software.

## Features

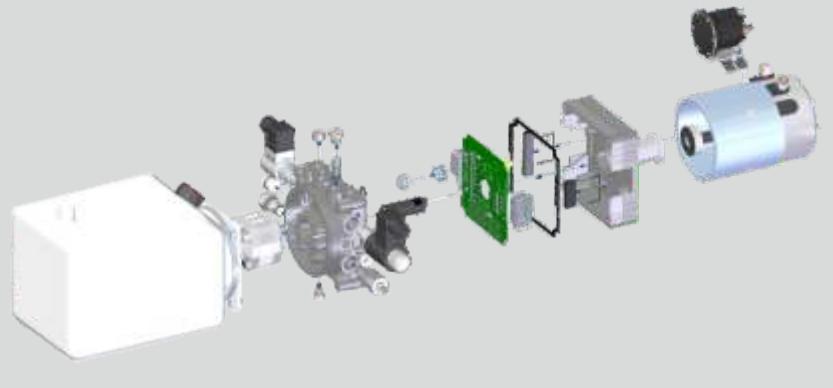

The core of the Smart Power Unit is the **HPC (Hydraulic Process Controller)**: a programmable controller with **SAFETY Architecture**. It integrates I/O, sensors, double core processors to enable SAFETY features, power Output in order to directly drive solenoid operated proportional or on-off valves without the need of external relays.

The **Hydraulic Process Computer** is integrated in the power pack and available in different executions: P/Q proportional control and LS functionality. See SPU catalog.

## Hydraulic Integration

The **HPC** is perfectly integrated with the standard **Hydronit Compact Pack** range since it can use same PPC components.

Hydraulic circuits are available with redundant valves in order to match mechanics to electronics and offer a **SAFETY RELATED** mechatronic power pack ready for **Industry 4.0** and **Smart Manufacturing**.

## Built in Sensors

The **Hydraulic Process Computer** integrates fluid sensors: one ceramic **Pressure sensor** reading the LS line, up to 350 bar.

An oil temperature sensor completes the fluid monitoring.  
Additional external sensors can be used through the I/O lines.

Sensors are embedded in the mechanic body and are available as a variable in the software programming environment.

## International Awards

Hydronit directly competing against European most innovative companies, has been awarded with multiple **Seals of Excellence** by the European Commission during **Horizon 2020 Framework Programme for Research and Innovation**.

In July 2017 it has been granted by EU Commission as project 779020

The **Smart Power Unit** is patented.

# POWER PACKS MICRO speaking code

**PPM**

Power Pack type

## Power Packs

### Standard mounting positioning:

Filler cap on P and T ports side  
AC motor electric box on cavity  
0-1-2 side  
DC motor and solenoid poles on  
cavity 0-1-2 side  
For horizontal mounting units,  
suction filter on mounting foot  
holes side

In lack of specific request by  
the customer, all power units  
are supplied assembled  
according to these basic rules.

This page contains only the  
most common codes and  
options.

For the full available range  
please check out next pages.

# Some typical applications

The **high level of modularity** and **circuit flexibility** of Hydronit hydraulic power packs and electropumps allow their use in the most varied applications: in addition to typical applications of **lifting equipment** and **hydraulic vehicles** (dump trucks, tail lifts, ...) and in the **industrial stationary** applications (presses, machine tools, hoists, hydraulic brakes, compactors,...), even in the **automotive industry** (drive doors and hood, suspension, campervan ...), **marine** (bridges, cranes, doors, ...), in the **alternative energies** sector, in **agricultural equipment**, in the field of **construction machinery**, in **explosions proof** environments. Hydronit has also developed **solutions for improvement** to equipment previously available on the market, including the use of **proportional components** and **electronics** for **forklift trucks**, **snow plows**, **brake** and **transmission equipment**, **loading ramps**,...

## DC applications

## AC applications

# BASIC INSTRUCTIONS

## General application for Hydronit Power Units

<b>Installation location</b>	Any. Take care of the correct positioning of the suction filter and pipe to avoid negative pressure at the pump inlet
<b>Environment temperature</b>	-15 ÷ +50°C
<b>Hydraulic fluid</b>	Fluid for hydraulic use mineral based or synthetic ISO 6743/4 / DIN 51519, viscosity 15 ÷ 100 mm <sup>2</sup> /s ISO 3448 (recommended viscosity 22 ÷ 46 mm <sup>2</sup> /s)
<b>Fluid temperature</b>	-10° ÷ +70°C
<b>Commissioning instructions</b>	<p>After connecting the electric motor and the suction pipe, check the direction of rotation of the pump with pulses of 1÷2 sec. For standard pumps the direction of motor rotation must be clockwise as viewed from the side of the motor fan.</p> <p>Flush the oil at atmospheric pressure in order to remove any impurity and air bubbles from the circuit.</p> <p>Connect all devices to the system and gradually increase oil pressure.</p> <p>Check the oil level and, if necessary, fill up to the maximum level.</p> <p>To ensure a correct and longlasting operation, check oil after 100h from commissioning and replace every year or 300h of use.</p>

## AC & DC ELECTRIC MOTORS

**Integral AC motors:** the engineered solution for compact and optimised power units from 0,25 to 1,8 kW, single or three phase. The AC motors are **directly flanged** on the central manifold for extra compactness.

A **single coupling** can suit all powers. We suggest that you adopt these advanced motors because of their special advantages over standard B14 IEC AC motors and because they are **designed specifically** for use on our micro power packs, offering **higher power density** than market standard motors. These motors are intended for intermittent use (S3 40%), which is the case for most micro-power pack applications. They can be used in emergency situations continuously at a reduced rated power (about 30% less than S3 nominal power).

Single phase motors should not run in any case without load for long periods to avoid overheating.

**B14 IEC standard AC motors:** the standard solution easily available on every market from 0,12 to 0,55 kW, single or three phase. These motors are normally procured by the customer itself. Hydronit provides adaptor flanges and double piece coupling for frame size: 63 and 71.

**Frame 80 DC motors:** with or without thermal protector and running time up to 6 min. Power from 0,15kW up to 1,2kW 12 or 24VDC and 0,8 kW 48 VDC. The permanent magnet construction allows their use in reversible units.

**Frame 114 DC motors:** power up to 2,2kW 24VDC for high performance. All motors have thermal protector switch as standard.

### Q & A

#### Are Integral AC motors compliant with the European Union Minimum Energy Performance Standards?

Hydronit AC integral motors are manufactured using the best technologies currently available and are specifically designed for mini power pack duties, typically intermittent ones. Hydronit motors have higher power density, lower weight and are cost effective, compared with standard IE3 motors on the market. Due to the specific field of application, Hydronit motors are not included in the requirements of the above mentioned Standard since they are specifically and solely manufactured for mini power pack intermittent duties. For continuous duty (S1) applications with 3 phase supply voltage, IE3 motors (IEC 60034-30) must be applied. Ask our sales office.

#### Are there special requirements to mount IEC B14 AC motors?

No special tools are required. Please carefully follow motor side coupling mounting dimension tolerance as per the relevant drawings. Failure to do so may cause malfunction of the power pack and even breakage of the coupling and pump.

#### Can I start single phase AC motors under load?

Single phase motors have a reduced starting torque due to their intrinsic design. Starting torque is around 30-40% of the nominal torque at full power output. When designing circuits where a single phase motor must start under load, a proper calculation must be done followed by a field test to ensure proper starting. Alternatively, you can overcome the problem with the startup valve SUV. Ask our technical office.

#### How do I dimension a DC motor?

DC motors are normally for intermittent duty. It is important to know the required flow in l/min or Gpm, working pressure in bar or PSI and the duty charge. Then, following the diagrams in following pages and relevant instructions, a proper motor/pump combination can be selected.

**DC motors selection**

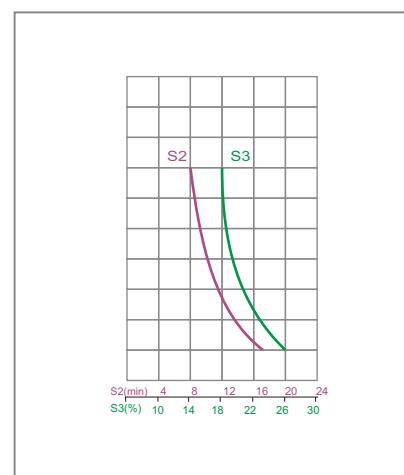

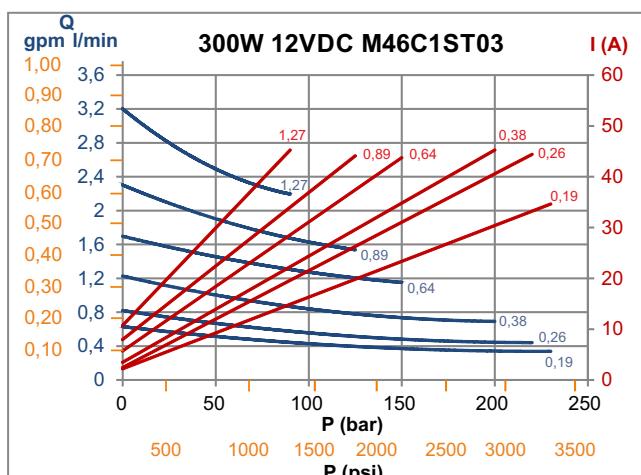

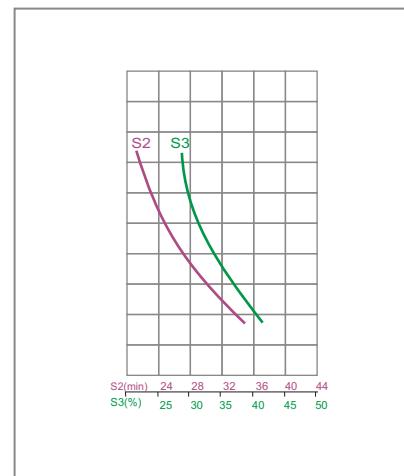

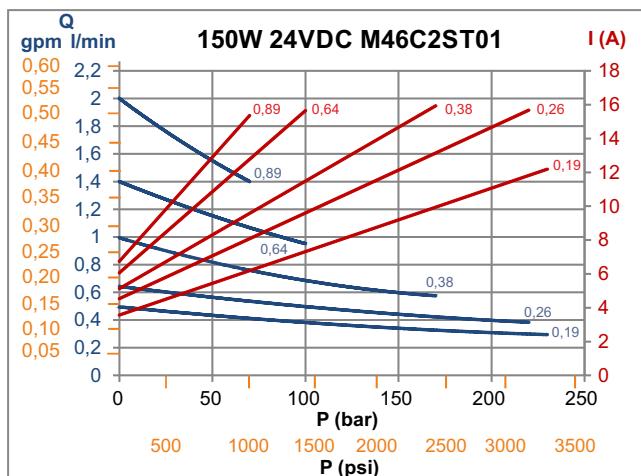

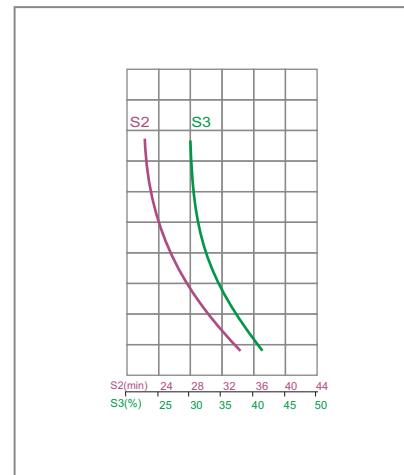

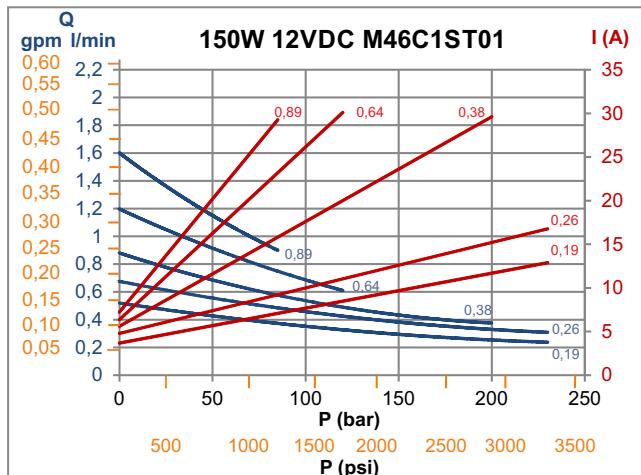

DC motor selection is a critical step for the proper power pack definition. Required Pressure, Required Flow, Service Factor (or Duty Cycle) should be known before starting the motor selection. Please note that DC motors speed is **not** constant and depends on torque. Once you choose a motor, look at Motor-Pump Performance diagram if a pump displacement (blue curve) is available at the **intersection** of required pressure and flow values. On the relevant "I" axis (red curve) you obtain the current drawn. When the intersection point is not exactly on a pump curve, select a smaller pump. On Motor Ratings diagram you can easily obtain the maximum allowed Service Factor: S2, Short Time Duty (min); S3, Intermittent Periodic Duty (% of total cycle). If the obtained Service values are not sufficient to meet required performances, choose a higher power or heavier duty motor and repeat the calculation on the new motor curves.

**Example:**

an application requires the following data: flow = 4 l/min, max pressure = 195 bar, duty cycle is unknown.

- check on 1,6 Kw 12V DC motor diagram: the 1,66 cc pump curve meet the intersection of 4 liters/minutes and 195 bar
- choose from curves a 1,66 cm<sup>3</sup>/rev pump. the corresponding "I" curve declares 200 A drawn current at 195 bar.
- project horizontally the current drawn to the Motor Rating diagram: the DC motor can work for maximum 3 min (S2) and S3 is about 9% of the total cycle, i.e. after 3 min working, the motor should cool down for at least 30 min.
- The total cycle time is calculated by adding the working time and the idle time (9% working time plus 91% idle time), in this case 33 min. If this duty cycle is not adequate for our application, we must choose a higher power or higher duty DC motor and check the relevant diagram again.

**INTEGRAL AC MOTORS**

CE

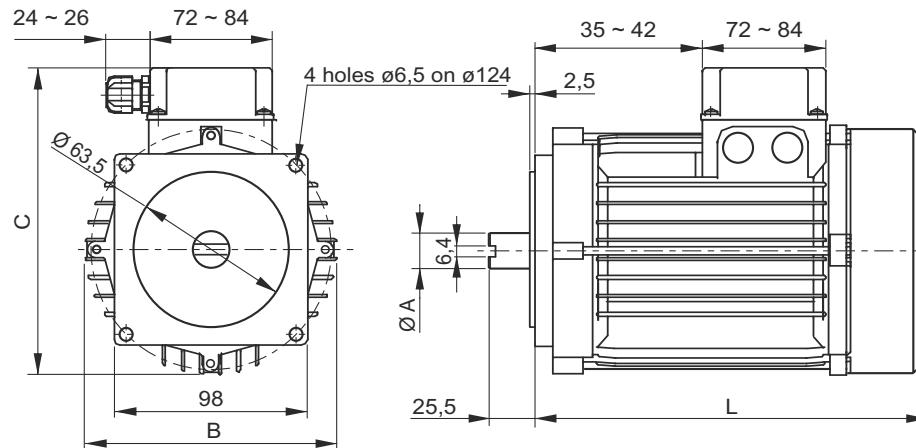

**Integral motors:** these are motors specifically engineered and manufactured for our mini power packs, featuring high power density and direct connection to the PPM.

They are available in single phase or three phase execution, in frame 71 with square flange and tang drive shaft. A single coupling fits all dimensions.

Other powers and/or special designs are available on request. Standard motors are for intermittent use: S3 40% is a typical work cycle consisting of up to six cycles (on-off) in one hour with the motor ON and OFF for 4 min to 6 min. These motors can be used in emergency situations even in continuous use at a reduced power (30% less than the nominal value S3).

Drawings show typical three phase motors.  
Single phase motors have a larger wiring box which also contains the capacitor(s) or can have an external capacitor(s).

Protection degree: IP54  
Insulation class: F  
Type of duty: S3 = intermittent use

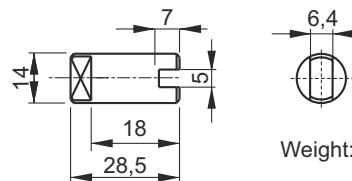

A single coupling will fit all motor frame sizes. This is the same coupling (pump side) included in the B14 motor mounting kit. The coupling is already included when specifying an integral AC motor in the PPM assembly code. When ordering spare motors, the coupling is not included and must be ordered separately.

**PPM motor assembly code**

N	AC integral motor
0,75	Maximum Power [kW]

	0,75kW (1HP)	<b>N0,75AC S2 71</b>	<b>N075ACS21S3</b>	15	138	180	210	6,5

**B14 IEC AC MOTORS**

**B14 IEC motors:** for market compatibility, any IEC standard B14 AC motor with frame 63 and 71 can be mounted. In this case two-piece couplings and additional adaptor flanges as per relevant tables must be mounted.

Motor overall dimensions are not indicated since they can vary substantially depending on the motor brand selected.

CE

**Main dimensions for B14 IEC standard motors**

Frame size	Typical power range	ØA	B	ØC	D	E	F	G	H	Mounting kit
63	0,12 ~ 0,25 kW 0,16 ~ 0,35 HP	11 j6	23	60	75	M5	12,5	18	4	NB14 63
71	0,25 ~ 0,37 kW 0,37 ~ 5 HP	14 j6	30	70	85	M6	16	25	5	NB14 71

**PPM B14 motor assembly code**

B14	Type
025	Power [kW]
AC	Alternate current
3	Phase: 3 = three phase S = single phase
4	Poles: 4 = four poles 2 = two poles
0	Frame size: 0 = 63 1 = 71
-	Duty factor: - = ED 100% (S1) S3 = intermittent duty

**Mounting kit spare parts**

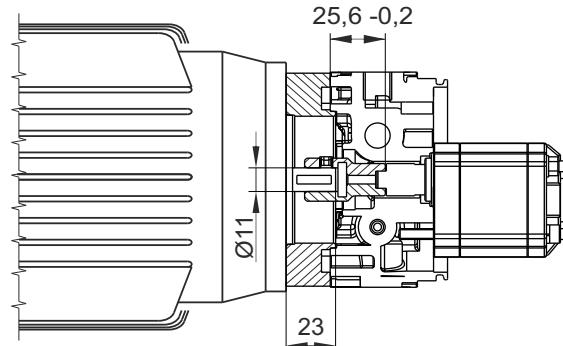

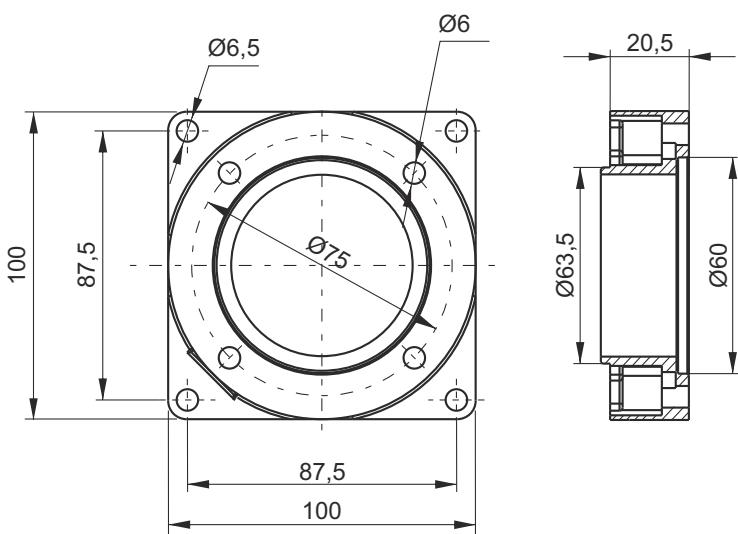

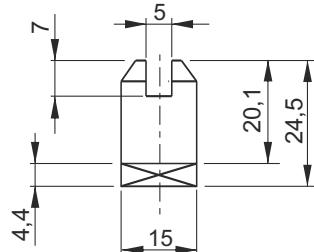

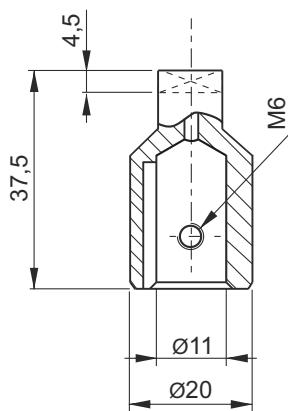

The B14 mounting kits are made of:

- a semi-coupling E3610000M on pump shaft side, that is the same used on AC integral motors.
- a semi-coupling on motor shaft side, which is different for each frame size,
- an adaptor flange to suit the central manifold, which is also different for each frame size.

The mounting kit is already included when specifying a B14 AC motor in PPM assembly code.  
When ordering spare motors, the relevant mounting kit is not included and must be ordered separately.

**SECTION A****MOUNTING KIT FOR FRAME 63 B14 IEC MOTORS**

Kit weight: 0,18 Kg

**Adaptor flange****Coupling**Pump side **E36100000M**Motor side **M36100011**

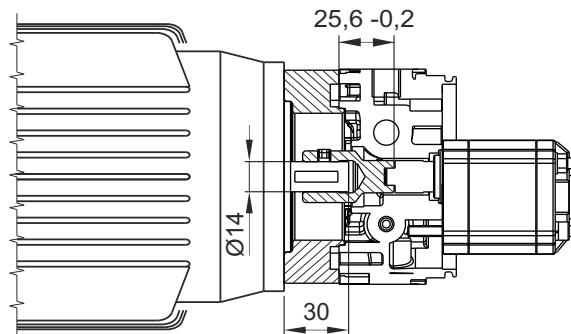

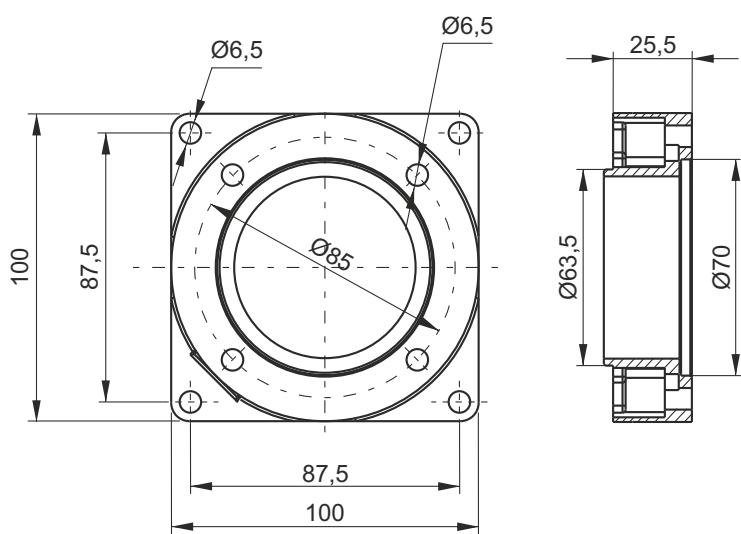

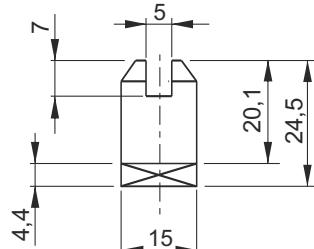

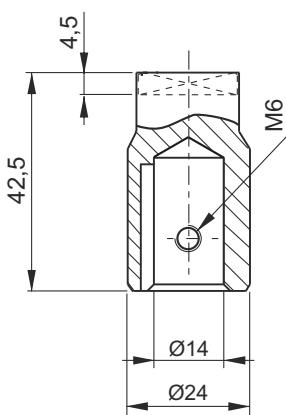

Description	Assembly code*	Spare part code

## MICRO CENTRAL MANIFOLD

A single **universal die-cast aluminium** central manifold in 3 different executions is the core part to realize all power units in industrial, mobile and marine fields. It features the **highest integration and flexibility** on the market, with up to **seven devices** which can be fitted inside, plus a wide selection of manifold blocks which can be connected to cartridge type valves or NG3 valves

The **interface** to hose fittings or external additional manifolds is **unified**. The P and T port tappings for the hose fittings are **1/4" BSP** (International standard) or **9/16-18UNF (SAE06)** for the American standard execution

Lateral cavities are according **SAE08 standard** (3/4-16UNF), except for the main check valve (5/8-18UNF) and main relief valve (M14)

The **interfaces** to tanks and motors are **unified**. All plastic or steel tanks have the same interface and can be easily swapped.  
All AC or DC motors can be fitted easily either directly to the central manifold or through adaptor flanges (B14 IEC standard motors)

Clockwise (our standard) or counterclockwise or bidirectional rotation tang drive shaft **standard gear pumps** can be mounted

The maximum flow is **6 l/min**, with a **low pressure drop**, and maximum motor power is 2,2kW, well above the average of other alternative products on the market

### Which micro central manifold execution should I choose?

MB type is the most widely applied for single acting or double acting circuits. M4 execution is recommended for compact and cost effective double acting circuits with a single cylinder while MR is for bidirectional pump and may integrate double relief valve, double pilot operated check valves and also an extra pilot operated check valve to ensure that differential cylinder circuits function properly (this extra valve discharges excess return flow from the piston side of the cylinder).

### Do I need special tools to assemble the components within the central manifold?

No. All valves are screw-in type in a single piece construction (no loose nuts, washers, springs,... difficult to assemble and falling apart). The components are easily assemblable with simple hand tools and hexagon keys.

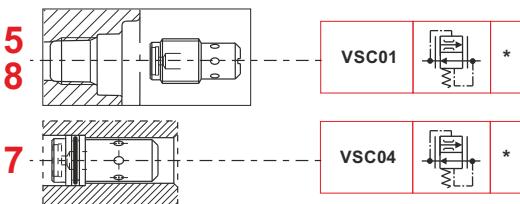

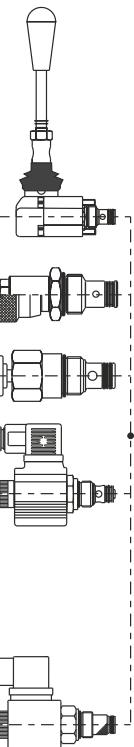

### Is the central manifold available as a loose component?

Yes. We can supply either fully assembled and tested power packs or kits of loose components, which can be kept in stock by our worldwide distributors and easily assembled to satisfy local market demand quickly and effectively. Central manifolds and core other components are 100% tested even when supplied as loose parts.

## NOTES

## GEAR PUMPS

K series. It's the standard choice.  
Specifically for micro power packs designed  
balanced pressure to improve the volumetric  
efficiency

R series. Bidirectional pumps with integrated suction  
check valves and two front outlet ports.  
They can be fitted on MR type central manifold

H series. It's designed and  
dimensioned for high pressure  
applications with peaks up to 270  
bar

### Why are pressure balanced gear pumps better than fixed clearance gear pumps used by some competitors?

Pressure balanced gear pumps are built with lateral compensation plates which reduce the mechanical clearance on the gears as the output pressure increases, relevant greatly improving the volumetric efficiency, reducing heat generation and energy consumption. The mechanical efficiency is always maintained at optimal levels.

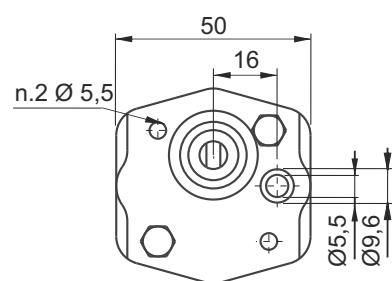

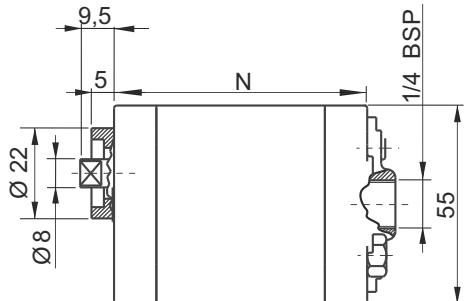

### Why are the pump technical specifications showing three maximum pressure levels?

Our pumps have three ratings for the maximum allowable pressure: 1-Peak: is the highest one and can be allowed for a maximum cycle of 2 seconds. 2-Intermittent: it can be applied on the pump for a maximum cycle of 20 seconds; 3-Continuous: it can be applied on the pump continuously.

## SECTION C

## G TYPE GEAR PUMPS

## Main features

Oil temperature	-15 ÷ +80 °C
Inlet pressure	0,7 < P < 3,0 bar (absolute pressure)
Fixing bolts	2 x M5 8.8 class steel tightening torque: 8 ÷ 9,5 Nm
Pressure limits definition	Peak pressure: cycle 2 s ON Intermittent pressure: cycle 20 s ON Continuous pressure: cycle always ON

Standard rotation direction: clockwise (from shaft side).  
Counterclockwise rotation pumps can be mounted on request.  
Ask our sales department.

## NOTES

## INTEGRAL COMPONENTS

The **hand pump cartridge** SAE08 (3/4-16UNF), 2 cc/stroke, is an affordable and easy way to add an emergency function to your powerpack

**Two way no leakage solenoid valves**  
SAE08 (3/4-16UNF), are available in Normally Open, Normally Closed, single and double locking executions. Manual override also available

**Pressure and flow proportional control valves** are available as standard, also with integrated PWM amplifier

The **main relief valve** is fitted in a M14 cavity and constructed with **dampening poppet** to increase the accuracy of pressure adjustment and avoid the typical noise of other valves on the market

All cartridges are supplied in **single piece**, easily screwable

The **main check valve** fits in SAE06 (5/8-16UNF) standard cavity and can be easily removed from the outside for cleaning and servicing

### How does the coding of the power pack works?

The power packs are coded with a speaking code, which is basically the list of subassemblies which make up the power pack (motor, pump, valves, tank,...). Integral components are those fitting inside central manifold cavities, which are numbered from 0 to 8. Each component has an assembly code, normally a single letter which compose the speaking code, and a spare part code in case they are ordered as loose components. The numbered cavities are indicated in the hydraulic scheme, so that it is easy to draw it starting from the speaking code itself, and on the central manifold casting too, to simplify assembling.

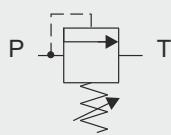

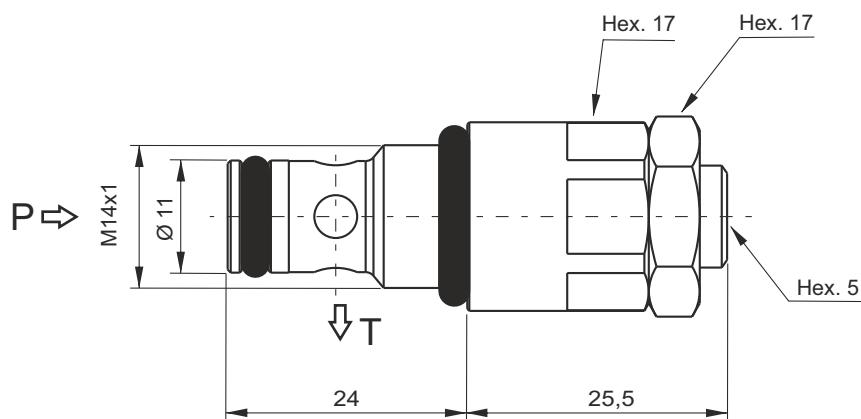

### There are several different coils and connectors for the cartridge solenoid valves. How do I choose the correct ones?

Normally closed 2-way solenoid valves (MSV30\*) use M130\*/M63\* series of coils either DC or directly AC. Normally open 2-way solenoid valves (MSV31E) can only use DC or RC (rectified current) coils due to their construction. When choosing a RC not rectified coil, an external rectifying bridge must be applied (ex. by adopting the KA132R\*\*\* connectors). MSV4V 4-way cartridge valves use the M63\* series coils only. M630 are for DC supply voltage, while M631 are rectified coils with integral rectifying bridge, to be supplied straight with AC current. A standard KA13200000 connector must be always used in this case. On page D180 you will find the coil / connector table for all valves.

### Which are the most used plugs?

G or H plugs are normally fitted in cavity 2 of MB central manifold when this cavity is not used for functional valves. L type plug goes in cavity 3 of MB manifolds, when this cavity is not used. MR central manifold cavities 2 and 3 are machined to 5/8-18UNF cavity to allow the mounting of piloted operated check valves. MG plugs must be used there if P. O. check valves are not needed.

## SECTION D

**VMDC15 - DIRECT ACTING MAIN RELIEF VALVE****Main features**

Maximum pressure	280 bar
Maximum flow	15 l/min
Weight	0,06 kg

Recommended tightening torque: 25 Nm

Note: nominal controlled flows, measured at 100 bar with an oil viscosity of 46 cSt at 50 °C, are to be taken as general reference values and must be tested in the field.

**Pressure drop diagram**

Note: Values measured on valve alone (no cavity) with an oil viscosity of 46 cSt at 50 °C. Pressure drop may change depending on fluid viscosity and temperature

## SECTION D

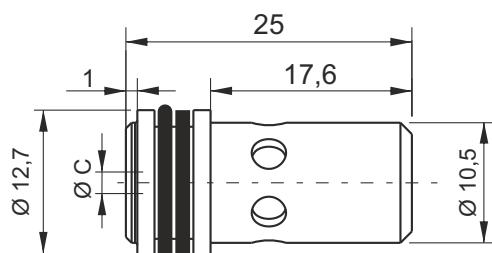

## VSC04 - PRESSURE COMPENSATED FIXED FLOW CONTROL VALVE

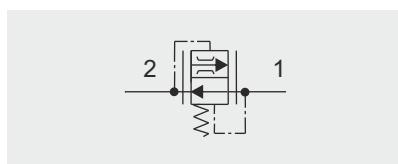

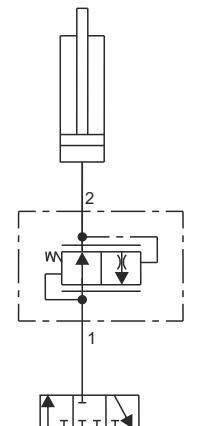

Controlled flow

2 ➡

Reversible flow

⬅ 1

## Main features

Max pressure	300 bar
Max flow	22 l/min
Weight	0,012 kg

Mounting cavity dimension: 12,7 H8  
 Recommended filtration settings: 25 + 50 µ  
 Oil temperature: -30 + + 80 °C

## Spare part code

- VSC** — Flow control valve pressure compensated
- 04** — Nominal size: 04
- \*** — Controlled flow: see below table

Note: Values measured on valve alone (no cavity) with an oil viscosity of 46 cSt at 50 °C. Pressure drop may change depending on fluid viscosity and temperature

## SECTION D

## MDV - DIRECT OPERATED TWO-WAY DOUBLE LOCKING SOLENOID VALVES

## Main features

Max pressure	up to 250 bar
Max flow	up to 15 l/min
Weight	0,11 Kg (without coil)
Internal leakage	5 drops/min at 350bar
Response time	30ms (energizing) 50ms (de-energizing)

Available voltage  
12VDC  
24VDC  
24VAC  
110RAC  
220RAC

Coils (see coils table) M140 series  
  
Normatives EN50081-1/EN50082-2  
(89/336 CEE  
electromagnetic comp.)  
73/23/CEE / 96/68/CEE  
(low voltage)

Recommended tightening torque: 25 Nm  
Recommended filtration: 25 + 50 µ  
Oil temperature: -30 + + 80 °C

## Spare part code

MDV	Two-way double blocking solenoid valve
30	Operation: 30 = normally closed 31 = normally open
E	Option: E = emergency (std)
0000	Supply voltage: 0000 = no coil (std) see coils table

## SECTION D

## MSV4V - DIRECT OPERATED 4/3 OR 4/2 DIRECTIONAL SPOOL SOLENOID VALVES

## Main features

Max pressure	210 bar
Max flow	11,5 l/min
Weight	0,37 Kg (1 solenoid) 0,64 Kg (2 solenoid)
Internal leakage	278 cc/min at 210 bar
Minimum pull-in voltage	85% of nominal
Available voltage	12VDC 24VDC 24VAC 110RAC 220RAC
Coils (see coils table)	M630 series M631 series
Normatives	EN50081-1/EN50082-2 (89/336 CEE electromagnetic comp.) 73/23/CEE / 96/68/CEE (low voltage)

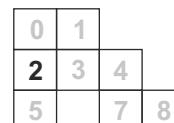

## Spare part code

<b>MSV4V</b>	4/3 or 4/2 directional spool solenoid valve
<b>A2</b>	<b>Spool configuration:</b> see below table
<b>00</b>	<b>Option:</b> 00 = std
<b>0000</b>	<b>Supply voltage:</b> 0000 = no coil (std) see coils table

## Assembly code

<b>4VA2 Voltage</b>
Ex: 4VA2 24DC

## Mounting cavities

Note: MSV4V can be mounted on central manifold type M4 only.

## Spools

## Double solenoid

<b>A2</b>	
<b>B2</b>	
<b>C2</b>	
<b>E2</b>	

## Single solenoid

<b>A11C</b>	 transition
-------------	----------------

Recommended tightening torque: 25 Nm  
Recommended filtration: 25 ÷ 50 µ  
Oil temperature: -30 ÷ + 80 °C

## SECTION D

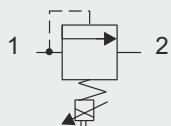

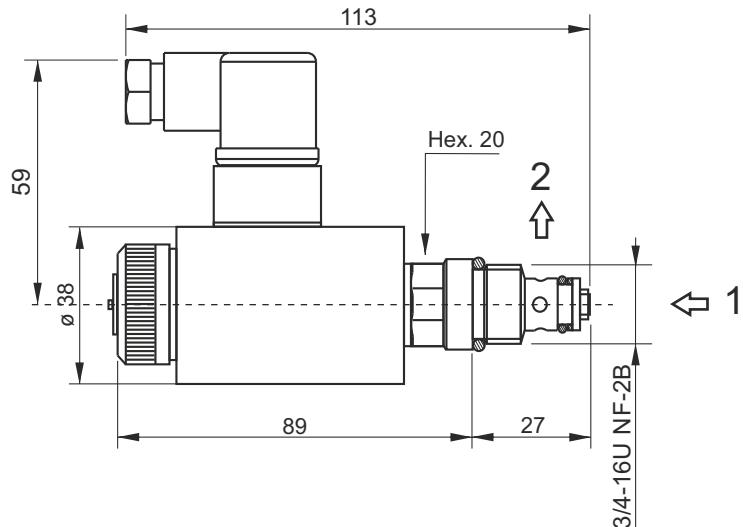

**VMPC2 - PROPORTIONAL PRESSURE RELIEF VALVE**

CE

**Coils**

Supply Voltage	Coil code	Connector code
12DC	98001190	KA132000B1
24DC	98002190	KA132000B1

For the controller see the VPC table in D section

**Main features**

Max pressure	350 bar
Max flow	2l/min
Weight	0,46 Kg
PWM	120Hz
Hysteresis	5%
Duty cycle	ED 100%
Voltage	+/- 10% nominal voltage
Normatives	EN50081-1/EN50082-2(89/336 CEE electr. comp.) - 73/23/CEE / 96/68/CEE (low voltage)

Recommended tightening torque: 25Nm  
Recommended filtration: 25 ± 50 µ  
Oil temperature: -30 ± + 80 °C

For the controller see table D170

Note: Supplying current to the coil from 0 to I max (see diagram), a proportional pressure variation is obtained on port P.

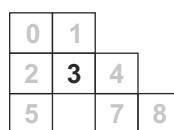

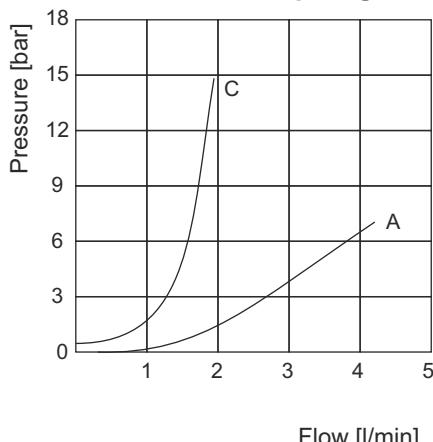

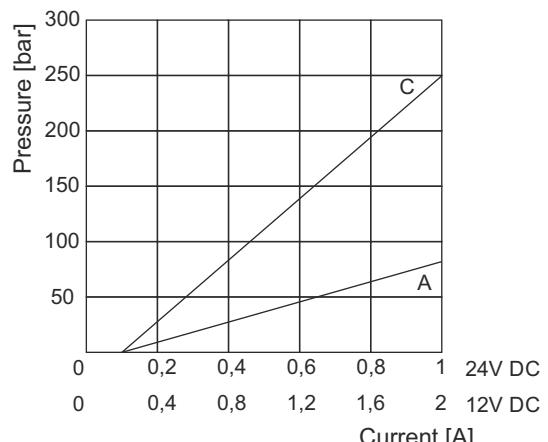

Note: Values measured on valve alone (no cavity) with an oil viscosity of 46 cSt at 50 °C. Pressure drop may change depending on fluid viscosity and temperature.

**Spare part code**

- VMPC** Direct acting proportional relief valve
- 2** Nominal size:  
2 = 2 l/min
- C** Working range:  
A = 10 ÷ 80 bar  
C = 40 ÷ 250 bar
- E** Options:  
E = emergency (std)
- 0000** Supply voltage:  
- 0000 = no coil  
- 12DC  
- 24DC  
see coils table

**Assembly code****P\*\*\* Voltage**

where \*\*\* stands for max setting pressure [bar]. e.g. P25012DC

**Mounting cavities****Pressure drop diagram****Pressure vs current**

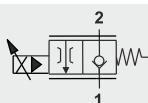

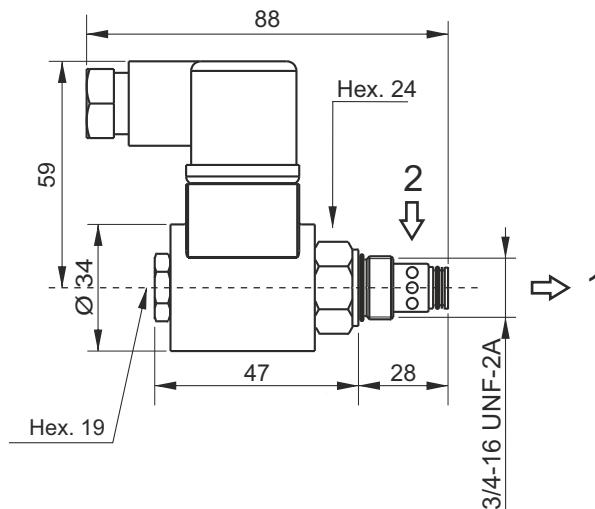

## CSPC15 - PROPORTIONAL FLOW CONTROL VALVE

Coils

Supply voltage	Coil code	Connector code
12DC	M6306012	KA132000B1
24DC	M6306024	KA132000B1

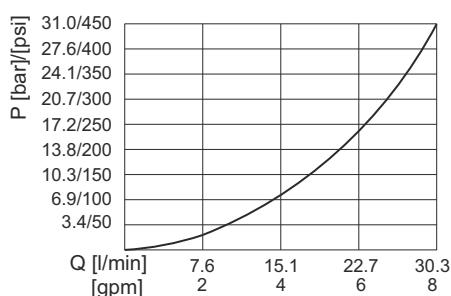

For the controller see the VPC table in D section

## Main features

Max press.	210 bar
Max flow	22 l/min
Weight	0,1 Kg (without coil)
PWM	120Hz
Hysteresis	5% (10% above 85% I <sub>max</sub> )
Duty cycle	ED 100%
Voltage	+/- 10% nominal voltage
Normatives	EN50081-1/EN50082-2 (89/336 CEE) 73/23/CEE / 96/68/CEE
Oil temperature	-40 - +120°C
Filtration	10 ÷ 25 µ
Tightening torque	30Nm

## Pressure Drop 2 &gt; 1 with fully open valve

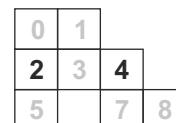

## Spare part code

CSPC	Proportional flow control valve
15	Nominal size: 15 = 15 l/min
0	Option: 0 = no option
0000	Supply voltage: - 0000 = no coil (std) - 12DC - 24DC see coils table

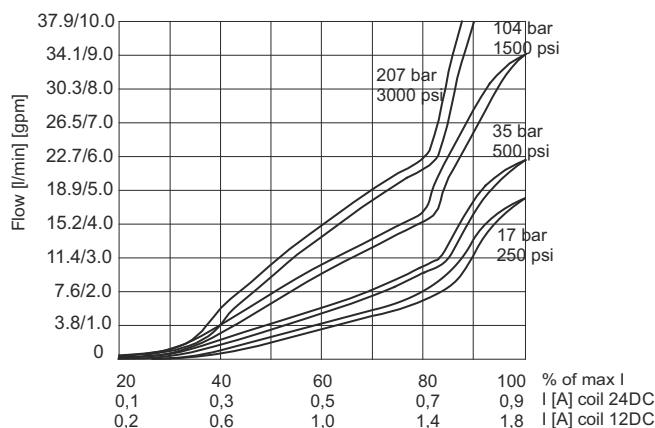

## Assembly code

T***	Voltage
eg: T12DC	

## Mounting cavities

## Flow vs current at different pressure drops

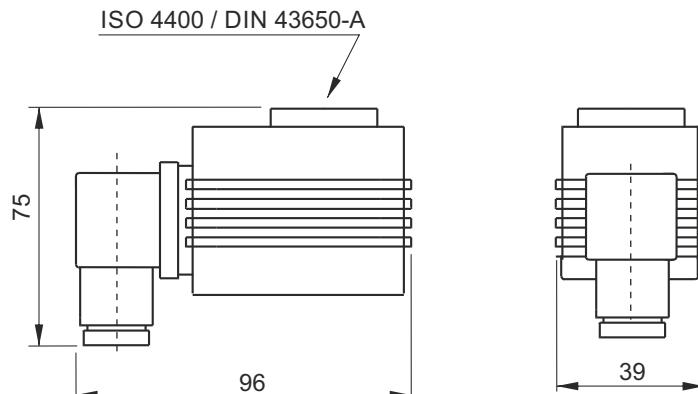

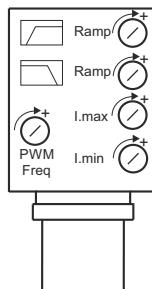

Note: Values measured on valve alone (no cavity) with an oil viscosity of 46 cSt at 50 °C.  
Pressure drop may change depending on fluid viscosity and temperature.

## SECTION D

## VPC - ELECTRONIC AMPLIFIER FOR PROPORTIONAL SOLENOID VALVES

## Main features

Supply voltage	12 / 24V DC
Voltage input signal range	0 ~ 10 V
Max current range	2,5A
PWM (optionally adjustable)	120 Hz (50 ~ 400 Hz)
Ramp adjustment (independent)	5%
Input impedance	100 kohm
Voltage	+/- 10% nominal voltage
Weight	0,11 kg
Normatives	EN50081-1/EN50082-2 (89/336 CEE electromagnetic comp.) 73/23/CEE / 96/68/CEE (low voltage)

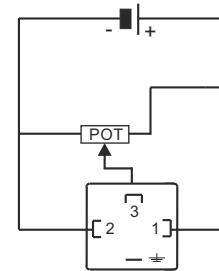

## Spare part code

**VPC** → Electronic amplifier for solenoid valves

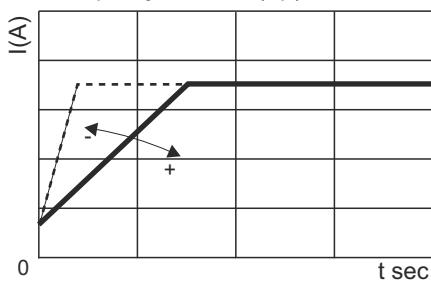

**00** → Options

Suitable for:  
CSPC15\*\*\* proportional flow control valve  
VMPC2\*\*\* proportional pressure relief valve  
other proportional valves

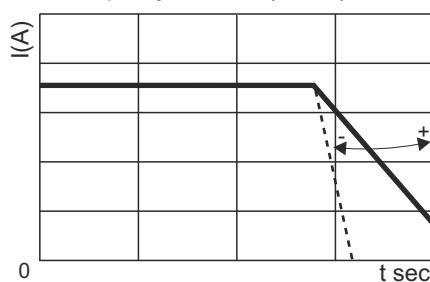

## Electric circuit

## Ramp adjustment (up)

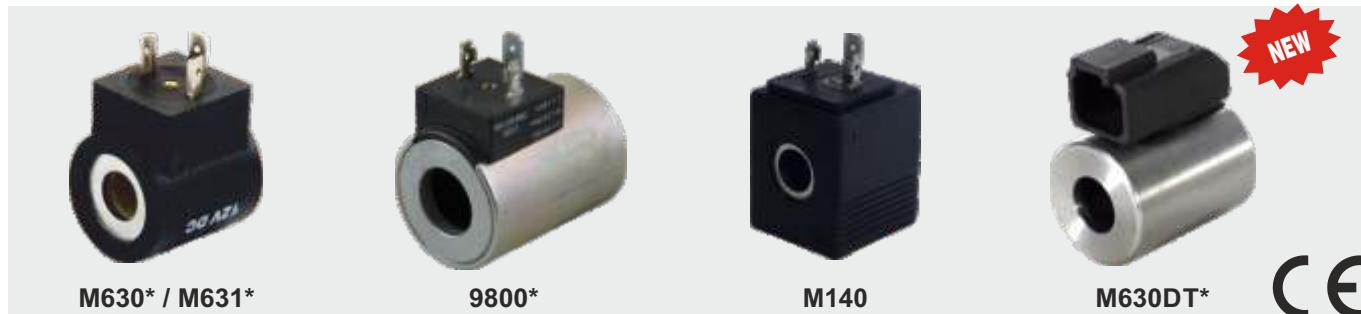

## Ramp adjustment (down)

## Instruction for use:

- 1) turn the "I MIN" trimmer fully counterclockwise;
- 2) adjust the external voltage input signal to the desired initial regulating (flow or pressure) value;
- 3) turn "I MIN" trimmer in a clockwise direction until valve just starts regulating;
- 4) adjust the external voltage input signal to the max value and adjust "I MAX" trimmer until the valve regulates the maximum flow or pressure on the hydraulic system.

Note: cavities 2 and 3 are machined SAE08 (3/4-16UNF) in central manifold MB and 5/8-18UNF in central manifold MR.

Cavity 2 is machined SAE08-4way in central manifold M4.

Cavity 4 is machined only in reversible central manifold MR.

## NOTES

## TANKS

Round steel tanks from **0,7** to **2,4 l**, for horizontal and vertical mounting

Square plastic tanks, from **1** to **3,5 l**, for horizontal and vertical mounting. Thanks to the special shape can be screwed to the body with automatic screw driver

Round plastic tanks from **0,4** to **1,2 l**, for horizontal and vertical mounting

### Better plastic or steel tanks?

Plastic tanks have several advantages. Among them: they do not corrode, the oil level is visible, they do not damage if they get bumped,... On the other hand steel tanks are to be preferred in case of ultra high or ultra low temperatures or when exposed to direct sunlight.

### Is it possible to design and make custom made tanks?

Yes. We can provide an adaptor flange (F80000012) which can be welded on custom made steel tanks, by the customer.

### How do I order spare tanks?

Tanks can be ordered without accessories just by adding a J in front of the relevant code (ex. JE50404006 instead of E50404006). When ordered with the normal code (ex. E50404006) all relevant accessories are included (plugs, filler breather, fixing devices,... depending on the kind of tank).

Tanks specified in assembly code (ex. 2,4HV) always include all relevant accessories.

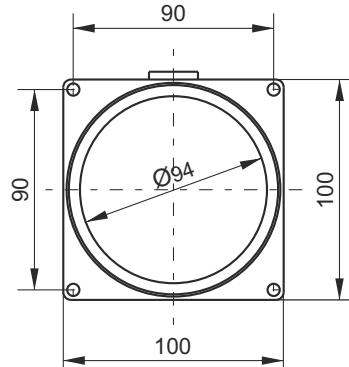

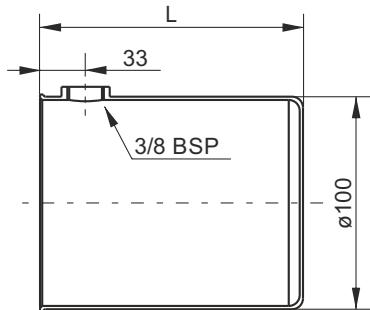

## SECTION E

## ROUND STEEL TANKS F &amp; H SERIES

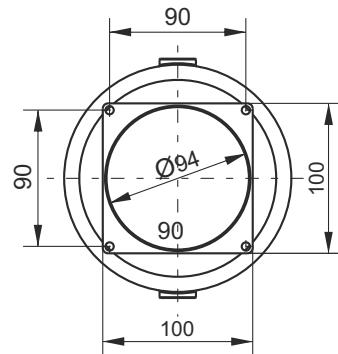

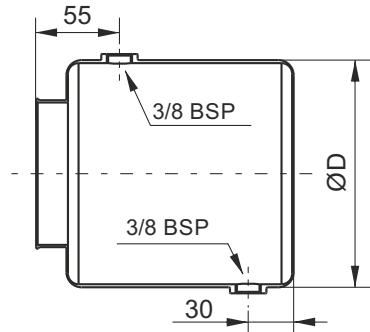

Recommended tightening  
torque for 3/8" BSPP: 10 Nm

Description	Spare part code	Assembly code	L (mm)	Weight	Actual filling volume (lt)	
					Horizontal	Vertical
0,7 l cylindrical horizontal / vertical mounting	E50403001	0,7F / 0,7FV	120	0,26 Kg	0,75	0,52
1,2 l cylindrical horizontal / vertical mounting	E50403002	1,2F / 1,2FV	186	0,38 Kg	1,1	0,9

Recommended tightening  
torque for 3/8" BSPP: 10 Nm

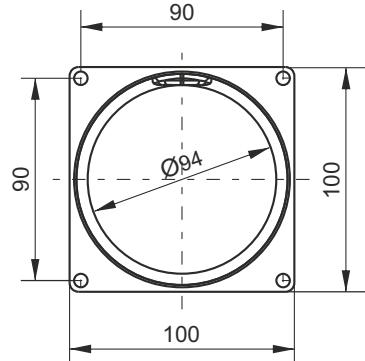

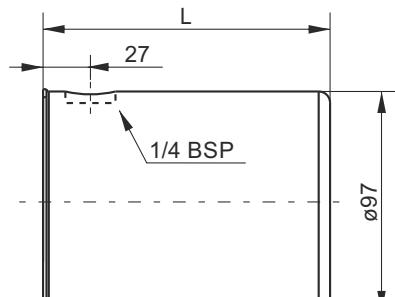

Description	Spare part code	Assembly code	L (mm)	ØD (mm)	Weight	Actual filling volume (lt)	
						Horizon.	Vert.
1,7 l cylindrical horizontal / vertical mounting	E50404004	1,7H / 1,7HV	170	120	0,64 Kg	1,5	1,2
2,4 l cylindrical horizontal / vertical mounting	E50404006	2,4H / 2,4HV	170	150	0,8 Kg	2,4	1,8

Material	Fe P04-EN10130 steel sheet 1,5 mm thickness
Fluid	Mineral based oil ISO/DIN 6743/4
Working temperature	-15 / +70°C

Note: the piping kit, standard suction filter, filler/breather and discharge plug are included when specifying the tank in PPM assembly code

When ordering spare parts, only the discharge plug and filler/breather are included

**ROUND PLASTIC TANKS R SERIES**

Description	Spare part code	Assembly code	L (mm)	Weight	Actual filling volume (lt)	
					Horizontal	Vertical
0,4 l round horizontal / vertical mounting	H50403001	0,4R / 0,4RV	90	0,07 Kg	0,45	0,35
0,7 l round horizontal / vertical mounting	H50403002	0,7R / 0,7RV	124	0,09 Kg	0,75	0,62
1,2 l round horizontal / vertical mounting	H50403003	1,2R / 1,2RV	186	0,14 Kg	1,17	1,05

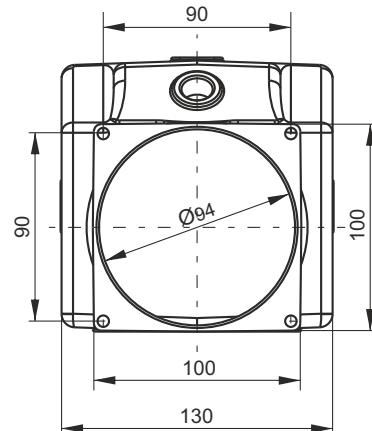

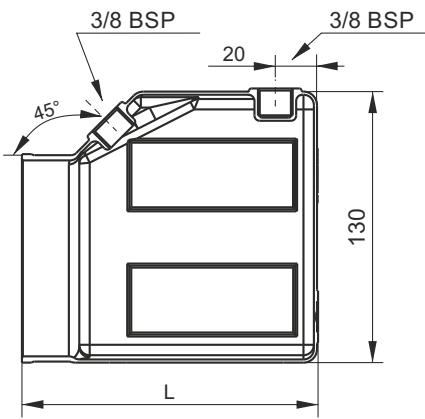

<b>Material</b>	PE-HD neutral / transparent color (DO NOT EXPOSE TO DIRECT SUNLIGHT)
<b>Fluid</b>	Mineral based oil ISO/DIN 6743/4
<b>Working temperature</b>	-15 / +70°C

Note: the piping kit, standard suction filter, filler/breather and discharge plug are included when specifying the tank in PPM assembly code  
When ordering spare parts, only the discharge plug and filler/breather are included

## SECTION E

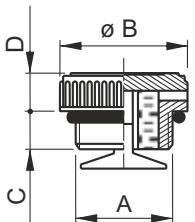

## SQUARE PLASTIC TANKS T SERIES

Description	Spare part code	Assembly code	L (mm)	Weight	Actual filling volume (lt)	
					Horizontal	Vertical
1 l square horizontal / vertical mounting	H50403005	1T / 1TV	125	0,23 Kg	1,0	0,8
1,5 l square horizontal / vertical mounting	H50403007	1,5T / 1,5TV	150	0,24 Kg	1,4	1,2
2 l square horizontal / vertical mounting	H50403009	2T / 2TV	211	0,34 Kg	2,2	2,0
2,7 l square horizontal / vertical mounting	H50403011	2,7T / 2,7TV	261	0,40 Kg	2,7	2,7
3,5 l square horizontal / vertical mounting	H50403013	3,5T / 3,5TV	326	0,49 Kg	3,7	3,9

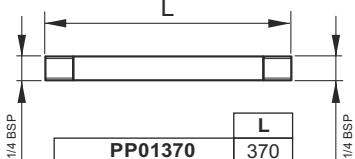

Material	PE-HD neutral / transparent color (DO NOT EXPOSE TO DIRECT SUNLIGHT)
Fluid	Mineral based oil ISO/DIN 6743/4
Working temperature	-15 / +70°C

Note: the piping kit, standard suction filter, filler/breather and discharge plug are included when specifying the tank in PPM assembly code  
When ordering spare parts, only the discharge plug and filler/breather are included

**TANK ACCESSORIES****Knurled filler breather with vane  
1/4" - 3/8" BSP**

## NOTES

## EXTERNAL MANIFOLDS & ACCESSORIES

Basic blocks for **NG3** modular valves **MICRO**, with parallel connection and side ports. They can be stacked modularly. Use simple 1/8 BSPP plugs to close the end P and T ports

**Pilot operated check valves integrated** into the NG3 MICRO modular block, eliminating the check valve module sandwiched between the base block and the directional valve

The **external hand pump** 4 or 8,8cc/stroke can be fitted between the central body and the NG3 MICRO modular blocks. The lever can be rotated 360 degrees to be placed in the most appropriate position

Adaptor manifold PPM to PPC. It's used to convert PPM interface to PPC one in order to mount PPC full range manifold blocks.

A full set of **accessories** is available to complete the power pack configuration

The PPM adaptor block for **stackable valves** SD01 and SD02 allows you to mount the range of SD02 valves, a modular alternative to the NG3 MICRO directional valves

### Which types of external manifold blocks can be mounted?

The central manifold exit face allows the mounting of manifold blocks fixed by 2x M8 bolts.

The first choice of external blocks is the NG3 MICRO system. Lateral exit ports base manifolds, spacer and 90° adaptor are available to modify dimensions and mounting positions for high flexibility.

To mount stackable directional valves the relevant adaptor plate PPM to SD02 (N50403007DN) is required. See section G technical tables for the relevant valve details.

To mount any block of the PPC manifolds range, adaptor M60403008E is required.

### When do I need to mount the spacer block?

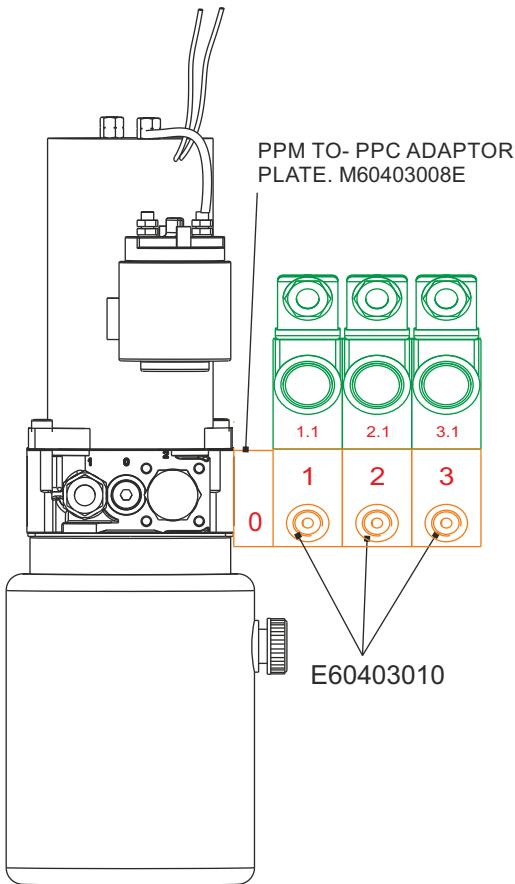

Whenever a large motor is mounted on the power pack, to avoid interference between the motor and external blocks and valves.

Normally M60403004 spacer must be mounted below the stack of NG3 MICRO manifolds whenever using any AC motor and with DC motors with frame 114.

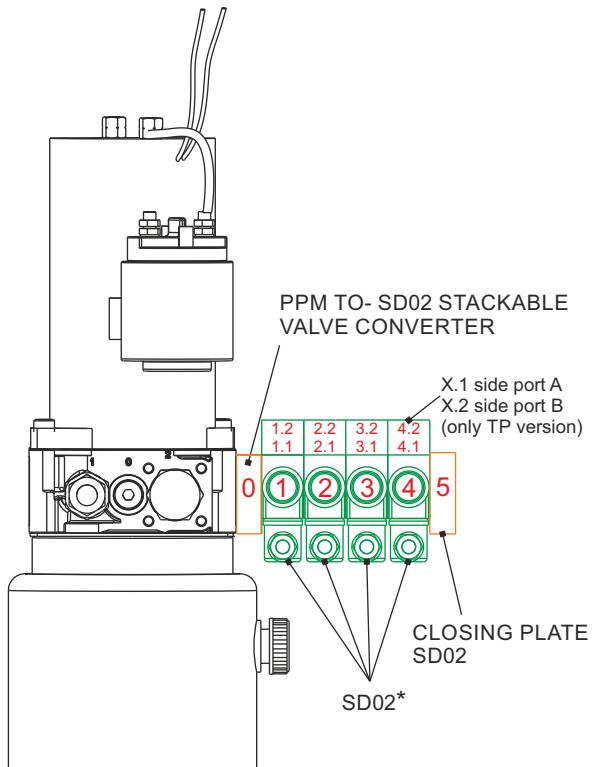

## SECTION F

## EXTERNAL MANIFOLDS &amp; VALVE MOUNTING EXAMPLES

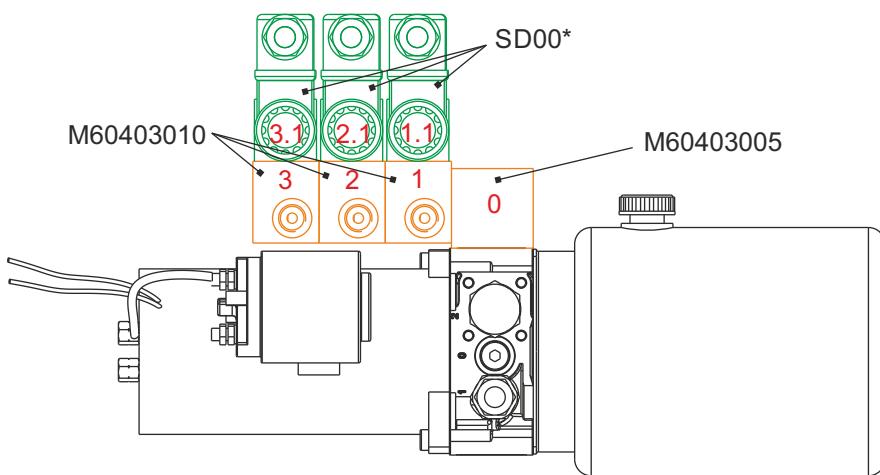

PPM + PPC MODULAR BLOCKS

PPM + SD02 STACKABLE VALVES

PPM + NG3 MICRO BLOCKS &amp; VALVES

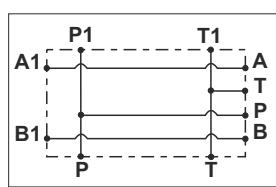

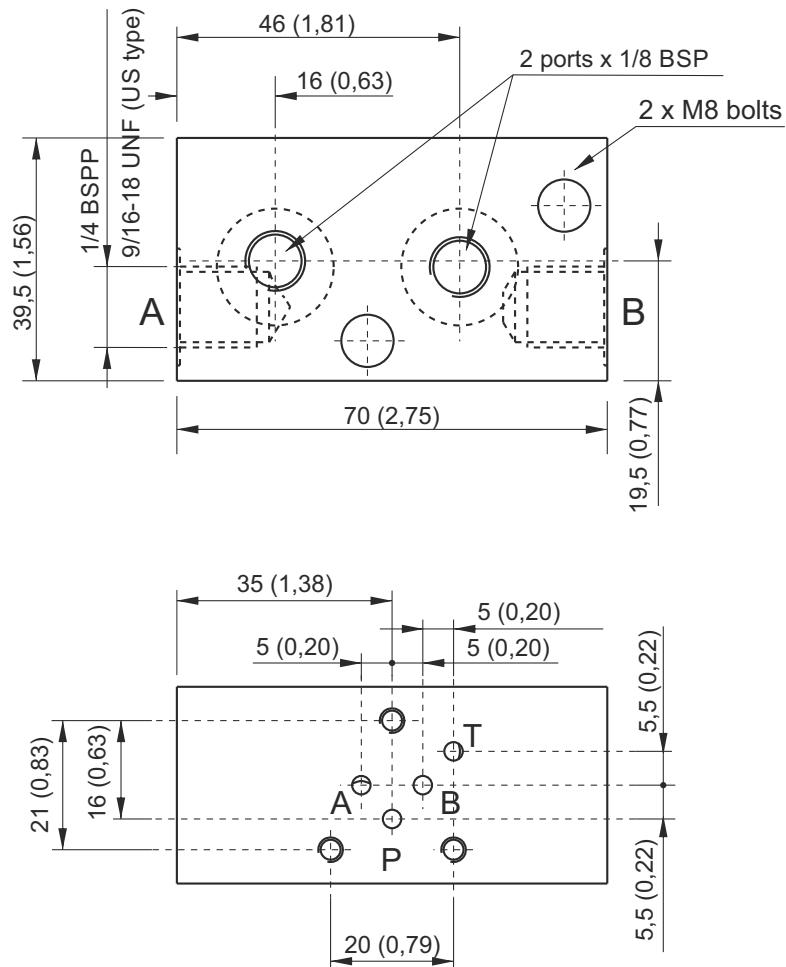

The micro powerpack external manifolds and valves are arranged following a stack level logic. Each stack is numbered as n, n.1, n.2, n.3,... where **n** is the basic manifold stack number, n.1 is the first valve mounted on top of manifold n, n.2 is the second one, mounted on top of n.1 one,... See above self-explanatory drawings where **manifolds** are coloured in **orange** and **valves** in **green**. **Stack levels** are numbered in **red**.

**NG3 MICRO MODULAR MANIFOLDS, LATERAL PORTS**

Dimensions in mm (inches)

**Main features**

<b>Max pressure</b>	350 bar
<b>Weight</b>	0,21 Kg (0,46lb)
<b>Fixing bolts</b>	2 M8 tie - rods steel class 8.8 or above

<i>Parallel connection</i>	Spare part code
Lateral ports	M60403010
Lateral ports US execution	M60403010US

Note: to add external manifolds to PPM assembly code, just add their spare part codes at the end of PPM code. Ex: PPM-0,8 12DC-MB-J-K0,6-D/280-G-1,5L+**M60403004+M60403010**

The NG3 micro valve attachment is on motor side.

Recommended tightening torque for M8 bolts: 16 Nm. Attention! Do not use tie rods with steel class less than 8.8.

## SECTION F

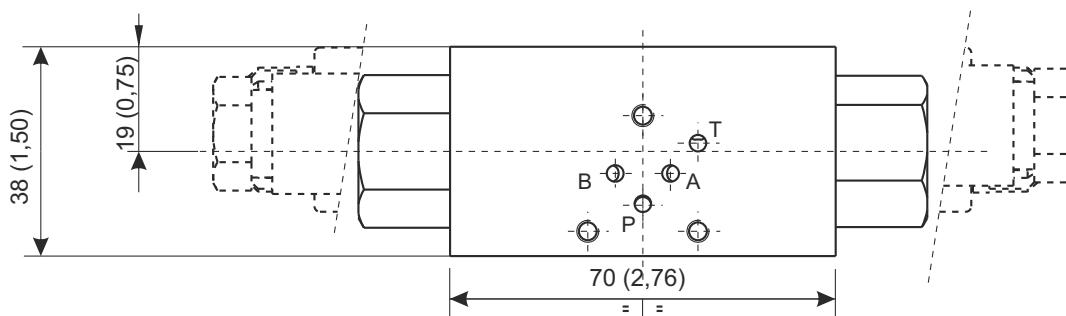

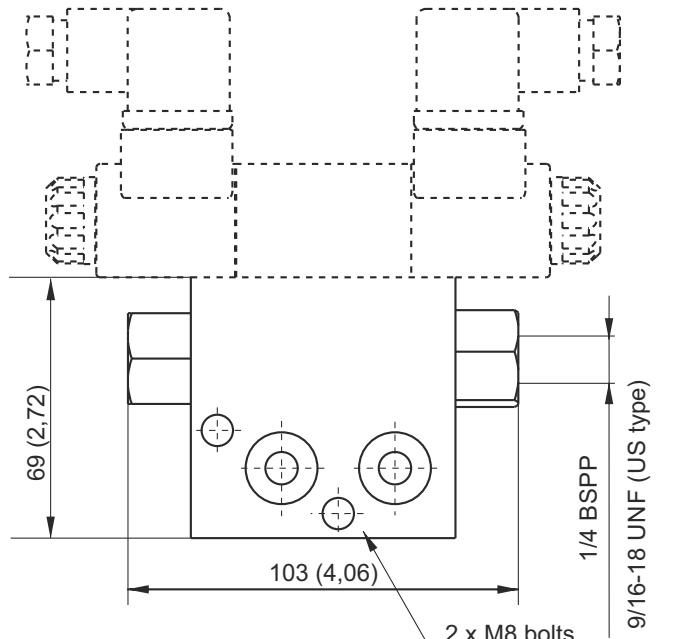

## NG3 MODULAR MANIFOLD WITH INTEGRAL PILOT OPERATED CHECK VALVES

Dimensions in mm (inches)

## Main features

## ASSEMBLY CODE - example

## Application example

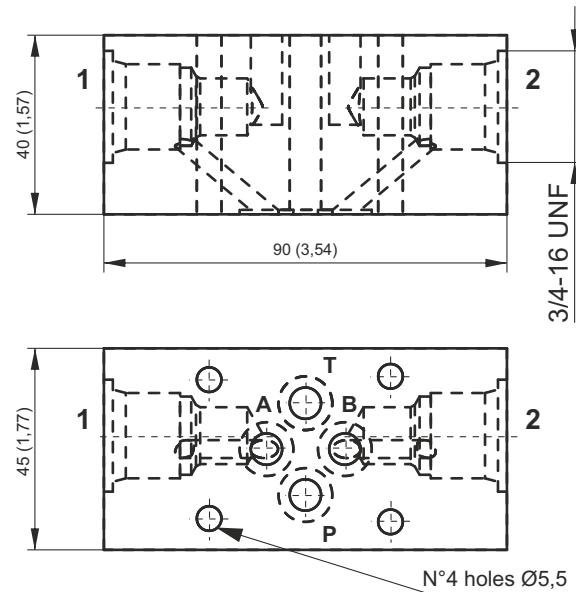

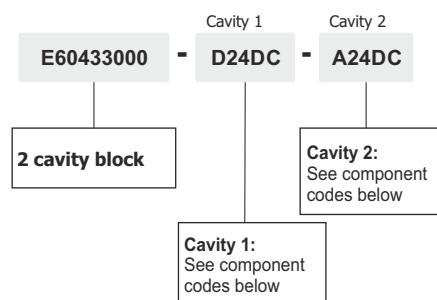

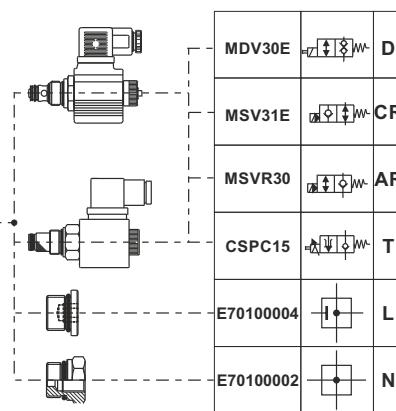

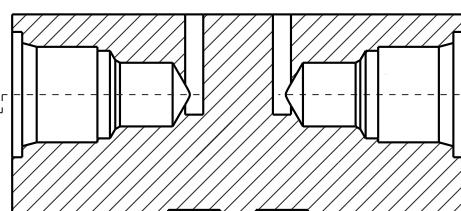

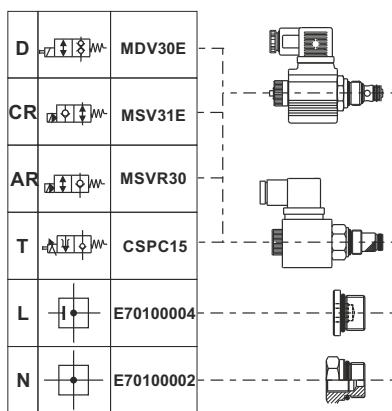

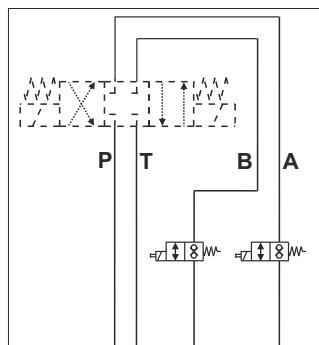

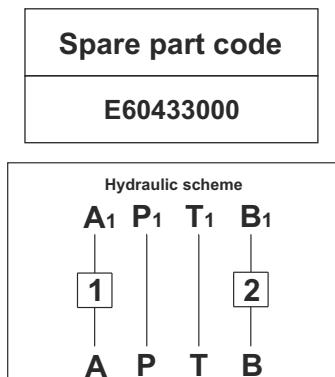

Note: to add external manifolds to PPM assembly code, just add their spare part codes at the end of the PPM code.  
Example: PPM-0,8 12DC-MB-KM0,4-JM-DM\_280-G-1,5T+M60403008E+E6030010+SD03C2+2x24DC\_M160.

**NG6 (CETOP 3) SANDWICH MODULAR MANIFOLD FOR SAE08 CARTRIDGE VALVES**

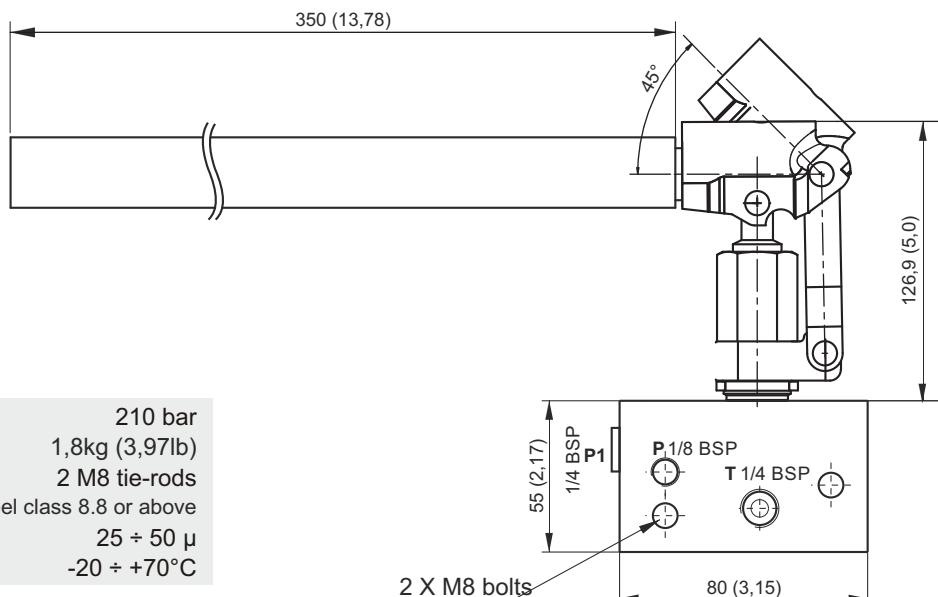

Dimensions in mm (inches)

**Main features**

<b>Max pressure</b>	300 bar
<b>Max flow</b>	up to 40 l/min
<b>Weight</b>	0,4 Kg (0,88lb)
<b>Fixing bolts</b>	4 M5x** bolts. 5Nm torque 10,9 class steel or above
<b>Fluid temperature</b>	-20 ÷ +80°C
<b>Filtration degree</b>	25 ÷ 50 µ

**ASSEMBLY CODE - example****Application example**

Note: to add external manifolds to PPM assembly code, just add their spare part codes at the end of the PPM code.  
 Example: PPM-0,8 12DC-MB-KM0,4-JM-DM\_280-G-1,5T+E60433008E+E6030010+SD03C2+2x24DC\_M160.

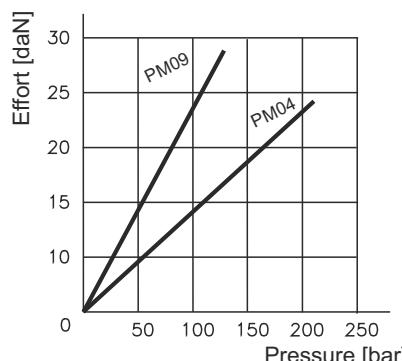

**HAND PUMP MODULAR MANIFOLD**

Dimensions in mm (inches)

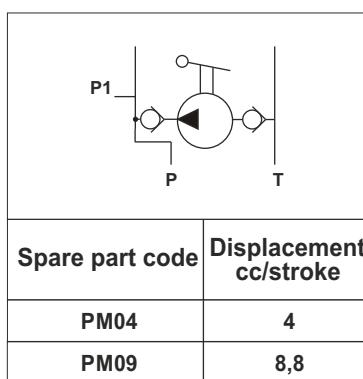

**Main features**

<b>Max pressure</b>	210 bar
<b>Weight</b>	1,8kg (3,97lb)
<b>Fixing bolts</b>	2 M8 tie-rods steel class 8.8 or above
<b>Filtration grade</b>	25 ÷ 50 µ
<b>Fluid temperature</b>	-20 ÷ +70°C

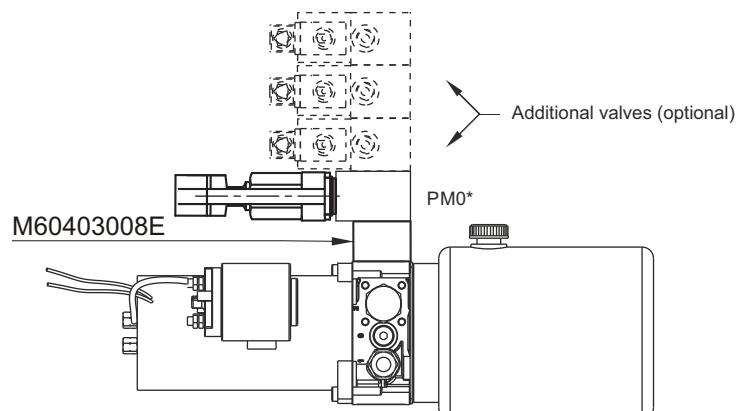

**Effort (daN)**  
operating on the top of the lever

Note: Values are measured only on the valve (no cavity) with oil viscosity of 46 cSt at 50 °C. The drop of the pressure can change by the fluid viscosity and fluid temperature.

**Spare part codes - cartridges only**

Description	Spare part code
4cc hand pump 7/8-14UNF cartridge + lever	CARTPM04L
8,8cc hand pump 7/8-14UNF cartridge + lever	CARTPM09L

**Mounting example**

Note: Recommended tightening torque for M8 bolts: 16 Nm. Attention! Do not use tie-rods less than 8.8.

Commissioning: the pump must be bled by opening the plug of the unused pressure port (P or P1), pumping a few times until all air bubbles and then clean oil come out, then tightening the plug again.

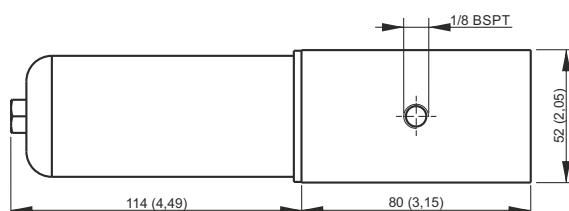

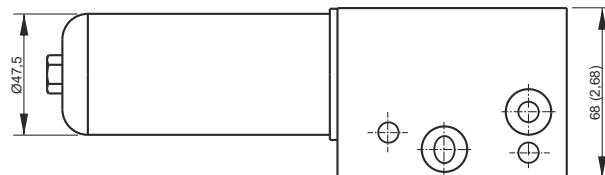

# SECTION F

## RETURN LINE FILTER MODULAR MANIFOLD

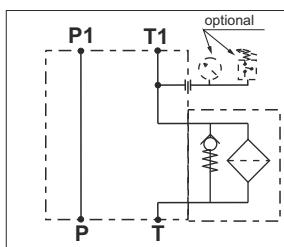

Dimensions in mm (inches)

### Main features

Open by-pass valve press.	1 bar
Max flow	20 l/min
Filtration grade	15 µ
Fluid temperature	-30 ÷ + 80 °C
Weight	0,87 kg
Fixing bolts	2 M8 bolts steel class 8.8 or above

### Hydraulic scheme

Note: standard code does not include the MIR40 pressure gauge or F4 pressure switch

### Spare part code

E60403020 Modular manifold with return filter on T

FO201385 15 micron replacement cartridge part number

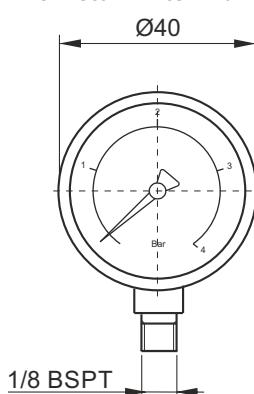

Note: Recommended tightening torque for M8 bolts: 16 Nm.

Attention! Do not use tie-rods less than 8.8.

Recommended tightening torque for spin on cartridge: 10Nm

### OPTIONS

#### Pressure gauge for return filter manifold

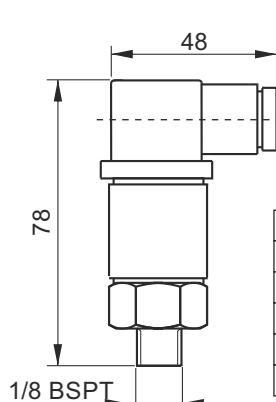

Weight: 0,1 Kg

#### Spare part code

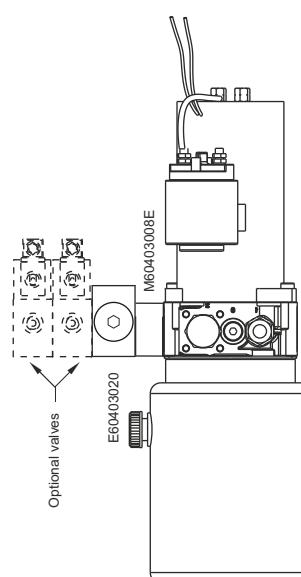

MIR4004

#### Pressure switch for return filter manifold

Setting range	0,2 ÷ 2,5 bar
Protection degree	IP 65
Hysteresis	10 ÷ 15 %
Weight	0,05 Kg
Max load	0,5 A a 250 VAC
Electric switch	NO/NC

#### Mounting example

#### Spare part code

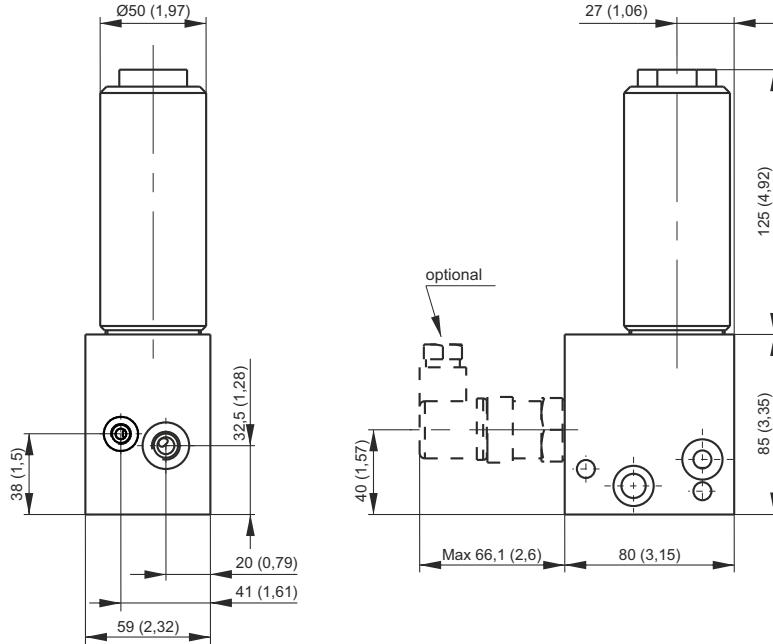

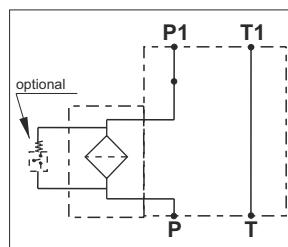

F4R0M3

**MODULAR BLOCK WITH PRESSURE FILTER**

Dimensions in mm (inches)

**Main features**

Backpressure allowable	21 bar
Max pressure	400 bar
Max flow	32 l/min
Filtration grade	5-15-25 µ
Fluid temperature	-30 ÷ +80 °C
Weight	2,3 kg
Fixing bolts	2xM8 steel 8.8 or better

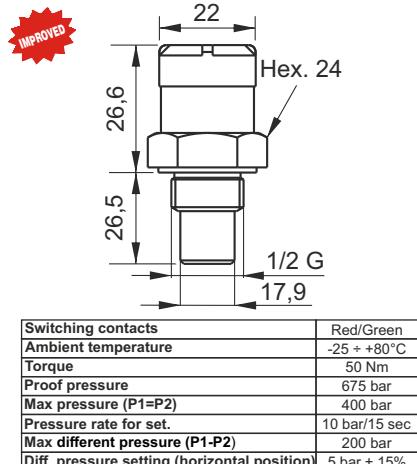

**Hydraulic scheme**

Note: standard code does not include the differential electric or visual pressure switch

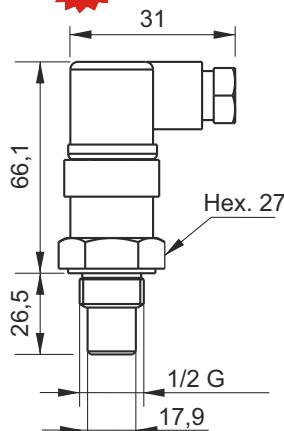

**Spare part code**

E60403025*	Modular manifold with pressure filter
B	Cartridge filter:
A	5 micron fiber reinforced cartridge filter (cartridge spare part code: HPFEHY05)
B	15 micron fiber reinforced cartridge filter (cartridge spare part code: HPFEHY15)
C	25 micron fiber reinforced cartridge filter (cartridge spare part code: HPFEHY25)

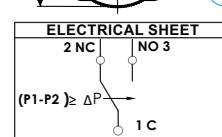

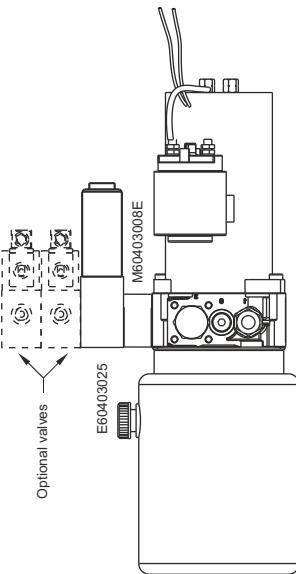

Note: other filtration grades cartridges available on request  
Recommended tightening torque for M8 bolts: 16 Nm.  
Attention! Do not use tie-rods less than 8.8  
Recommended tightening torque for spin on cartridge: 45Nm

**OPTIONS****Differential pressure visual indicator****Spare part code**

DPV03400

**Differential pressure switch**

Diff. pressure setting	5 bar ±15%
Protection degree	IP 65
Switching contacts	SPDT
Weight	0,16 Kg
Max different pressure (P1-P2)	200 bar
Proof pressure	675 bar
Max pressure (P1=P2)	450 bar
Torque	50 Nm
Pressure rate for set.	10 bar/15 sec
Ambient temperature	-25 ÷ +85°C
Voltage 14 Vdc	5 (4) A
Voltage 30 Vdc	4 (3) A
Voltage 125 Vdc	5 (3) A
Voltage 250 Vdc	3 (2) A

## NOTES

## EXTERNAL VALVES

**NG3 MICRO** directional valves: the optimized solution for **top performance** with **ultra compact dimensions**. Each valve requires a base modular manifold

**STACKABLE** directional valves: the advanced solution to conventional spool valves, to reduce power pack dimensions and weight. A and B threaded ports are directly machined in to the valve body. Additional cavities allow extra flexibility in the hydraulic circuit design

**NG6 (Cetop 3)** modular **sandwich valves** for flow and pressure control, and overcentre. These valves use the same cartridges as those in the power pack central manifold

**NG6 (Cetop 3)** valves: the conventional choice for market compatibility and universal service around the world. Each valve requires a base modular manifold.

**Cartridge valves** in external blocks: the cost effective and lightweight solution

### What are the advantages of NG3 MICRO directional valves and stackable directional valves compared to NG6 (Cetop 3) valves?

Lower weight, smaller dimensions, lower cost. Each stackable valve height of just 31mm allows you build a stack of, for example, 7 valves in 217mm. A similar stack made with cetop 3 valves would be nearly double the height. NG6 (Cetop 3) directional valves are to be preferred when other valves (pilot operated check valves, flow controls, pressure controls,...) are added to the hydraulic circuit.

### Is it possible to manufacture special manifold blocks with customized valve combinations for specific applications?

Yes. Whenever quantities justify the investment in design and manufacturing. Ask our sales department first.

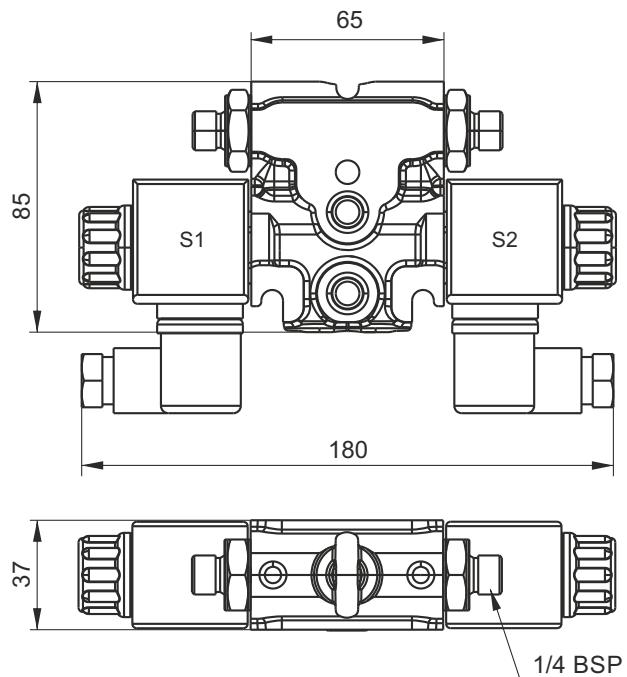

### Which coils and connectors do I select for the spool type directional control valves?

Ng3 MICRO valves SD00\* series use the M100 series of coils, 12 or 24 VDC. SD02\* bankable valves share the same M630/M631 coils series of the integral solenoid valves. NG6 (Cetop 3) valves SD03\* series use M160 series of coils either DC or RC (rectified current). When choosing a RC coil, a rectifying bridge connector must be chosen (KA132R\*\*\*), except for M631 coils series which have an integral rectifying bridge. See coils table at the end of section G.

## SECTION G

## STACKABLE MODULAR DIRECTIONAL SOLENOID VALVES WITH REAR PORTS

## Options

Description	Spare part code
Closure plate, to be used as the last element	<b>SD02TOP</b>
Kit 3 tie rods + nut M8 8.8 (x = number of element)	<b>SD020x</b>

## Main features

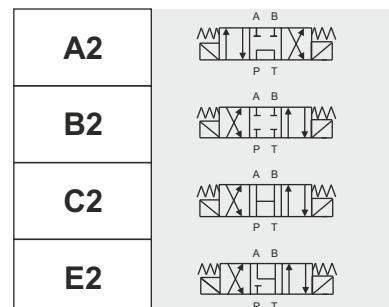

Max pressure	250 bar
Max pressure on T port	50 bar
Max flow	50 l/min
Weight	1,37 Kg (1 solenoid) 1,67 Kg (2 solenoid)
Internal leakage	0,02÷0,06 l/min at 100bar, 21 cSt
Fixing bolts	3 TCEI M8 tie-rods 15 Nm torque. 8.8 class steel or above
Coil insulation	Class H
Electric connection	DIN 43650-A / ISO 4400
Protection class	IP 65 / DIN 40050
Duty cycle	ED 100%
Voltage required	+/- 10% nominal voltage included as standard
Manual Overide	EN50081-1 / EN50082-2 (89/336 CEE electromagnetic comp.) 73/23/CEE / 96/68/CEE (low voltage)
Standards	-20°C +80°C
Fluid temperature	

## Spare part code

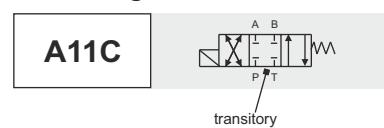

- SD02** Stackable modular directional solenoid valve
- E2** Spool configuration: see below table
- RP** Option:
  - = free outputs
  - RP = outputs with piloted check valves (only spool E2 and C2)
- 24DC** Supply voltage: see coils table section G

## NG6 (CETOP 3) MANUAL DIRECTIONAL CONTROL VALVES

## Main features

<b>Max pressure</b>	300 bar
<b>Max pressure on T port</b>	150 bar
<b>Max flow</b>	30 l/min
<b>Weight</b>	1,32 kg
<b>Fixing bolts</b>	4 M5x30 bolts 5Nm torque
<b>Fluid temperature</b>	10,9 class steel or above -20 ÷ +80°C
<b>Filtration degree</b>	25 ÷ 50 $\mu$

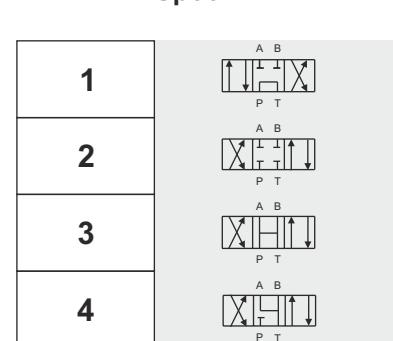

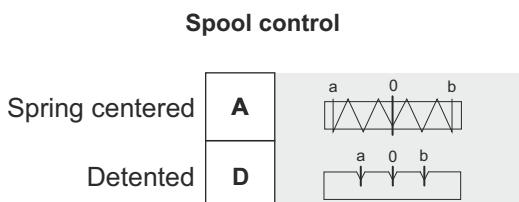

## Spare part code

**HD03** — Cetop 3 manual directional control valve

**A** — Spool control:  
see table below

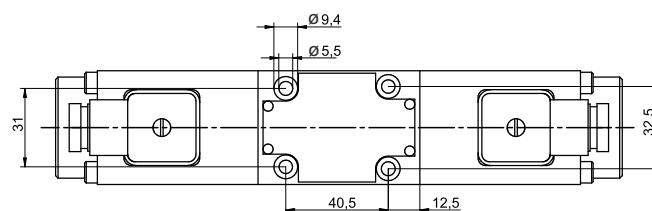

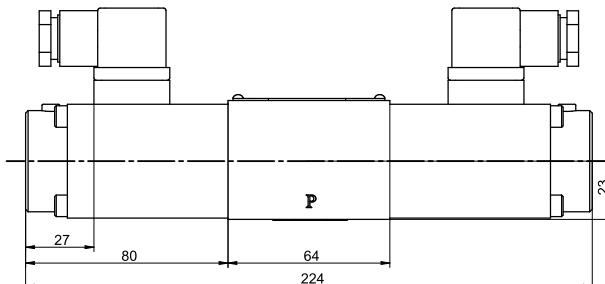

**1** — Spool configuration  
see table below

**-** — Options:  
- = std

**CETOP3 (NG6) PROPORTIONAL DIRECTIONAL VALVE**

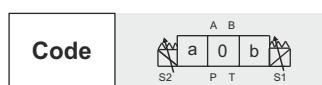

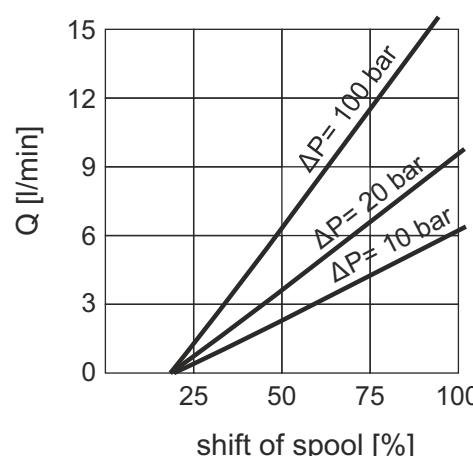

NEW

**Main features**

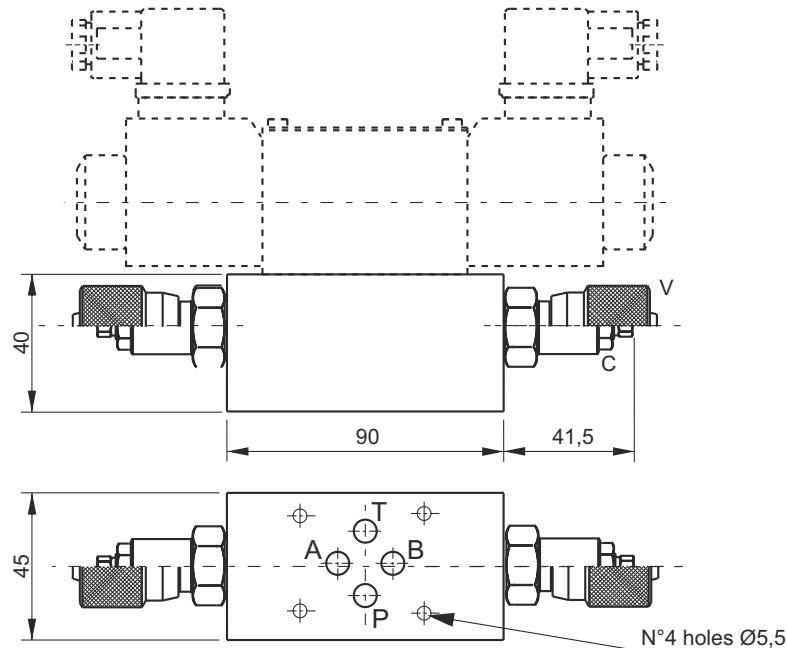

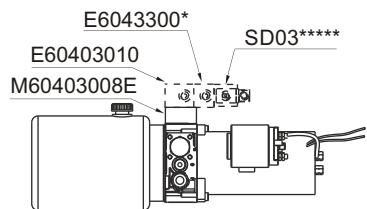

<b>Max pressure</b>	315 bar
<b>Max pressure on T port</b>	160 bar
<b>Max flow</b>	up to 10 l/min
<b>Weight 2 solenoids</b>	2,5 Kg
<b>Weight 1 solenoid</b>	1,8 Kg
<b>Coil insulation</b>	Class H
<b>Electric connection</b>	DIN 43650-A / ISO 4400
<b>Protection class</b>	IP 65 / DIN 40050
<b>Duty cycle</b>	ED 100%
<b>Voltage required</b>	+/- 10% nominal voltage
<b>Manual Overide</b>	push
<b>Standards</b>	EN50081-1 / EN50082-2 (89/336 CEE electromagnetic comp.) 73/23/CEE / 96/68/CEE (low voltage)

**Code**

- SPD03** CETOP3 (NG6) proportional directional valve
- E2** Spool configuration: see table below
- 10** Flow [lpm]
- Options: - = std

**Spool****Flow vs current**

## SECTION G

**NG6 (CETOP 3) SANDWICH FLOW CONTROL VALVE****Mounting example****Main features**

<b>Max pressure</b>	300 bar
<b>Max flow</b>	15 l/min
<b>Weight</b>	Single valve: 0,52 kg Double valve: 0,64 kg
<b>Fixing bolts</b>	4 M5x° bolts. 5Nm torque 10,9 class steel or above
<b>Fluid temperature</b>	-20 + +80°C
<b>Filtration degree</b>	25 ÷ 50 µ

**Spare part code**

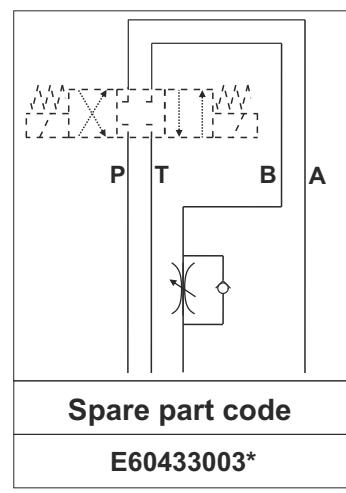

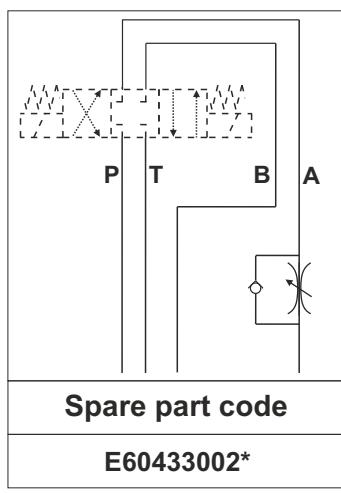

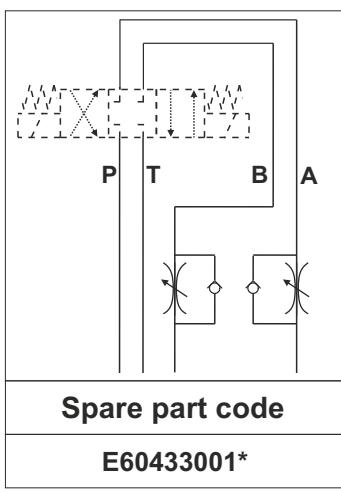

**E6043300\*\*** — **NG6 (Cetop 3) sandwich meter-out flow control valve**

**1** — **Type:**

- 1 = on A and B
- 2 = on A
- 3 = on B

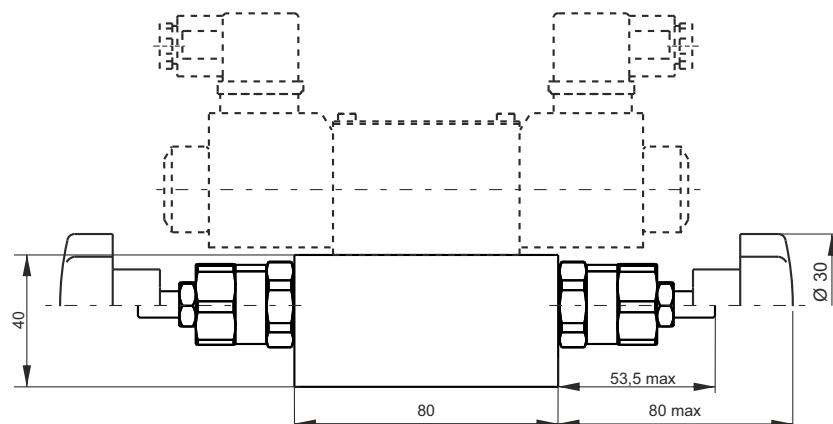

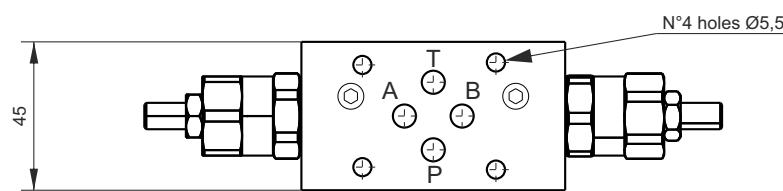

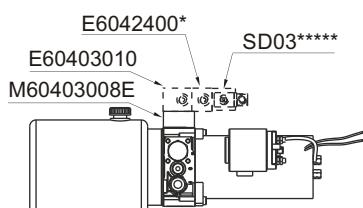

**-** — **Adjusting device:**

- = screw (std)
- V = handwheel

Notes: code does not include the Cetop solenoid valve.

° Bolt length depends on number of modular blocks and type of valve.

**NG6 (CETOP 3) SANDWICH RELIEF VALVE****Mounting example****Main features**

<b>Max pressure</b>	350 bar
<b>Max flow</b>	20 l/min
<b>Weight</b>	Single valve: 0,52 kg Double valve: 0,64 kg
<b>Fixing bolts</b>	4 M5x° bolts. 5Nm torque 10,9 class steel or above
<b>Fluid temperature</b>	-20 + +80°C
<b>Filtration</b>	25 ÷ 50 µ

**Spare part code**

**E6042400\*\*** — **NG6 (Cetop 3) sandwich relief v.**

**1** — **Type:**

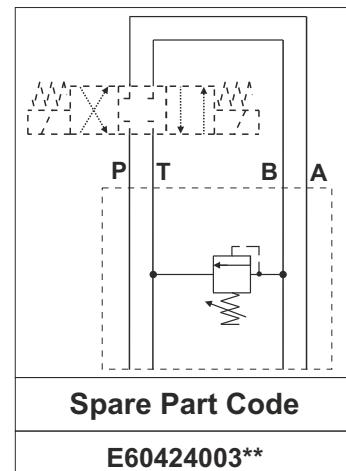

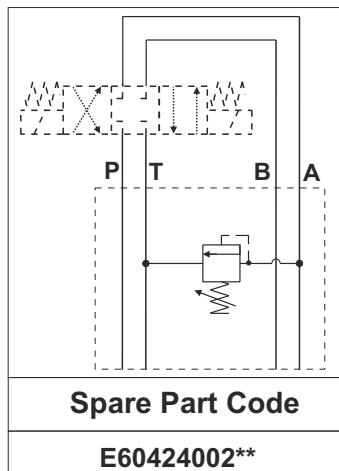

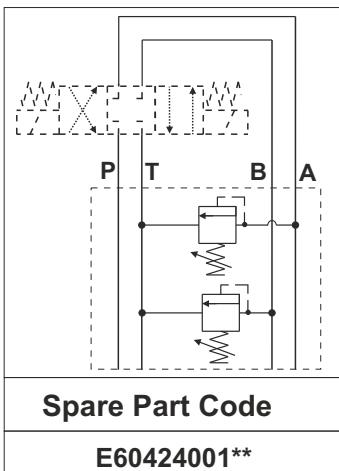

- 1 = on A and B
- 2 = on A
- 3 = on B

**Pressure range settings:**

- A = 3 ÷ 60 bar
- B = 40 ÷ 120 bar
- C = 80 ÷ 250 bar
- D = 150 ÷ 350 bar

**Option:**

see VMDC20 table in section D

Notes: code does not include the Cetop solenoid valve. When E60423001 relief valves have different pressure ranges, please specify them separately.

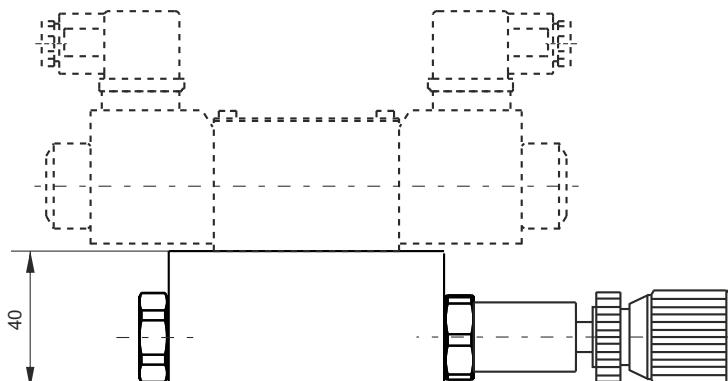

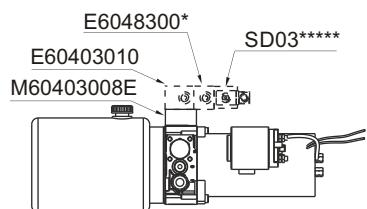

eg: E60424001AB=60 bar max for valve on A port, 120bar max for valve on B port.

° Bolt length depends on number of modular blocks and type of valve.

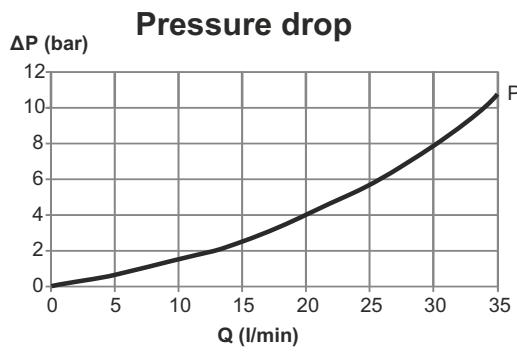

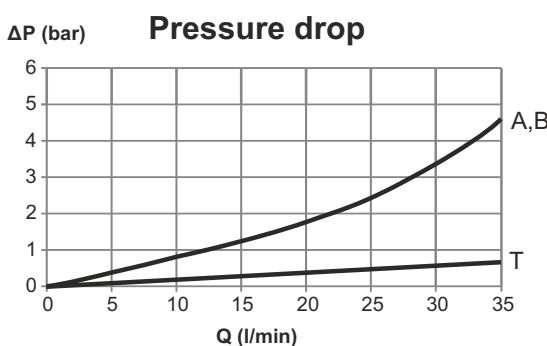

## SECTION G

**NG6 (CETOP 3) SANDWICH PRESSURE REDUCING VALVE**

Mounting example

**Main features**

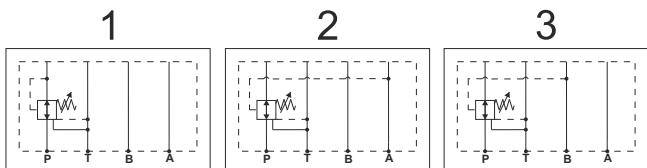

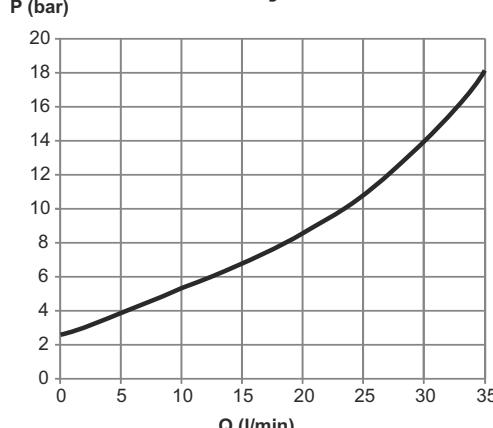

<b>Max pressure</b>	210 bar
<b>Max flow</b>	35 l/min
<b>Weight</b>	1,3 kg
<b>Fixing bolts</b>	4 M5x** bolts. 5Nm torque 10,9 class steel or above
<b>Fluid temperature</b>	-20 ÷ +80°C
<b>Filtration</b>	25 ÷ 50 µ

**Spare part code**

**E6048300\*** — NG6 (Cetop 3) pressure reducing valve

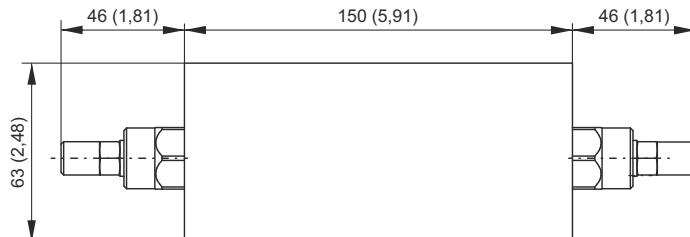

**1** — Hydraulic scheme (see below):  
1: reducing on P  
2: reducing on A  
3: reducing on B

**B** — Spring range:  
B: 7-70 bar  
D: 70-210 bar

**Minimum adjustable P**

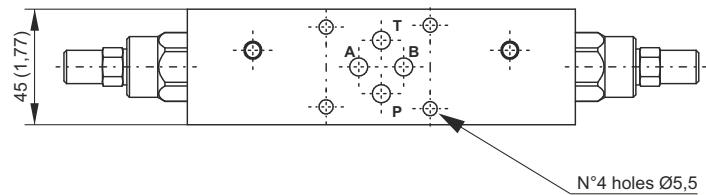

**NG6 (CETOP 3) SANDWICH MODULAR OVERCENTRE VALVE**

Dimensions in mm (inches)

**Main features**

<b>Max pressure</b>	350 bar
<b>Max flow</b>	up to 50 l/min
<b>Fixing bolts</b>	4 M5x** bolts. 5Nm torque 10,9 class steel or above
<b>Fluid temperature</b>	-30 ÷ +80°C
<b>Filtration degree</b>	25 ÷ 50 µ
<b>Pilot ratios</b>	4.25:1

Setting pressure must be at least 1,3 times the maximum load induced pressure.

**Spare part code**

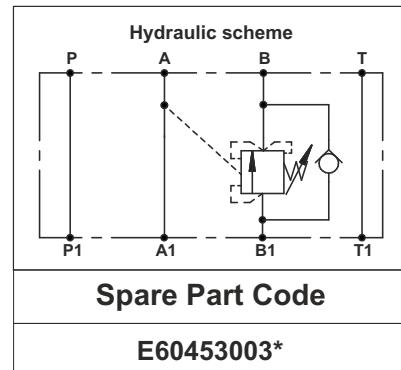

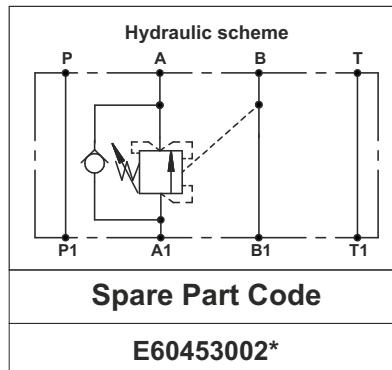

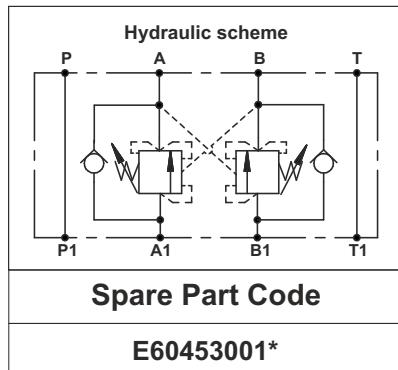

**E6045300\*\*** — **NG6 (Cetop 3) sandwich overcentre valve**

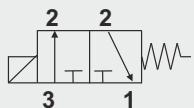

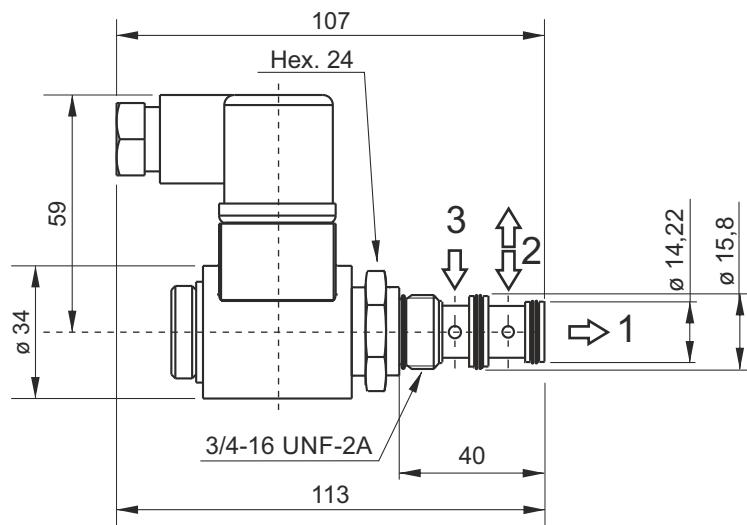

**1****Type:**

- 1: on A and B
- 2: on A
- 3: on B

**A****Pressure range settings:**

A = 30 ÷ 220 bar  
B = 60 ÷ 350 bar

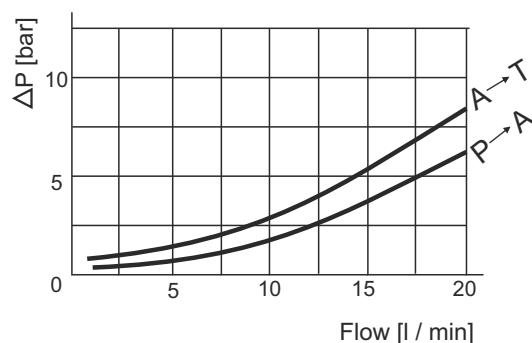

**MSV3V - DIRECT OPERATED 3/2 WAY DIRECTIONAL SPOOL SOLENOID CARTRIDGE****Main features**

<b>Max pressure</b>	210 bar
<b>Max flow</b>	12 l/min (20 l/min without block)
<b>Weight</b>	0,35 Kg (with coil)
<b>Coil insulation</b>	Class H
<b>Electric connection</b>	DIN 43650-A / ISO 4400
<b>Protection class</b>	IP 65 / DIN 40050
<b>Duty cycle</b>	ED 100%
<b>Voltage required</b>	+/- 10% nominal voltage
<b>Torque recommended</b>	30 Nm
<b>Fluid temperature</b>	-25 ÷ +70°C

**Spare part code**

- MSV3V** — Three-way direct acting solenoid valve
- 40** — Spool type: 40 = std
- 0** — Options: 0 = no options (std)
- 0000** — Supply voltage: 0000 = no coil (std) see coils table
